

1. Associate Consultant - SAP

Description

Al Watania Information Systems is seeking a proactive and detail-oriented Associate Consultant to join our team. In this role, you will support the implementation and maintenance of SAP solutions to help our clients improve their business processes. You will work closely with senior consultants and project teams to deliver high-quality service and ensure successful project outcomes. This is an excellent opportunity for individuals aiming to build a strong foundation in SAP consulting within a professional environment.

Key Responsibilities

- Assist with gathering and analyzing business and technical requirements.
- Support the configuration, testing, and deployment of SAP modules.
- Collaborate with clients and team members to resolve issues and implement enhancements.
- Prepare documentation, reports, and user manuals to support SAP solutions.
- Provide end-user training and ongoing support as needed.
- Stay current with SAP technologies and best practices.

Requirements

Bachelor's degree in Computer Science, Information Systems, Business Administration, or related field.

Fresh graduate or up to 1 year of experience

Basic understanding of SAP modules and business processes.

Strong analytical and problem-solving skills.

Good communication and interpersonal skills for client interaction.

Ability to work effectively both independently and in a team environment.

Willingness to learn and adapt to new SAP technologies.

SAP certification or relevant training is an advantage.

Benefits

High Category Medical Insurance coverage

Exposure to high-impact, multi-industry client projects across Saudi Arabia

Work within a dynamic and growing SAP practice

Opportunities for professional development and career progression

2. Associate Consultant Bain & Company

Description & Requirements

To view the Associate Consultant job description for our Montreal office, [click here](#).

Bain & Company is a global consultancy that helps the world's most ambitious change makers define the future. We work with leading organizations across industries and geographies on their most critical challenges, delivering impact in strategy, operations, digital transformation, sustainability, mergers and acquisitions, and more.

WHY BAIN

Bain is a launchpad for your career, where you'll work on the most interesting challenges alongside a bright and supportive peer group who will push your thinking, celebrate your progress, and grow with you.

From day one, you'll build a strong foundation and business toolkit, working across a wide range of industries and contributing to work that helps global clients, including senior executives and C-level leaders, address complex strategic issues and translate them into actionable plans.

WHAT YOU'LL DO

Associate Consultants are integral members of our consulting teams, working alongside teammates across levels on case teams embedded within client organizations, including many of the world's leading companies. You'll bring fresh thinking, structured problem solving, and a collaborative spirit to help solve high-impact business challenges.

Here's a snapshot of what you'll do:

Break down complex problems using hypothesis-led thinking and rigorous analysis to generate insights that shape strategic decisions

Own discrete workstreams such as market sizing, financial modeling, scenario planning, or benchmarking to deliver clear, actionable recommendations

Use data, tools, and digital platforms, which may include Bain's proprietary platforms and emerging capabilities such as generative AI to support analysis and decision making

Adapt and deliver by taking on varied responsibilities depending on the needs of each case, from research and analysis to implementation support

HOW BAIN WILL SUPPORT YOU

While the learning curve is steep and the work is challenging, you'll be supported every step of the way through training, mentorship, and a culture that helps you thrive. You'll learn from colleagues across regions, tapping into Bain's global network of expertise, resources, and shared communities. Whether on a case, in training, or through firmwide initiatives, you'll build meaningful relationships and expand your perspective.

3. ABOUT YOU:

This role is ideal for final-year undergraduates, non-MBA master's students, or early career professionals. Eligibility and application deadlines vary by office. Please refer to our office information for additional details.

Associate consultant candidates typically meet the following qualifications:

A university degree from a renowned academic institution

Fluency in English, along with additional language requirements for the office you're applying to

Strong analytical skills and a curious mindset

Clear written, verbal, and presentation skills

Ability to manage multiple priorities and deadlines

Collaborative, with the initiative to contribute ideas independently

Willingness to travel and work onsite with clients and in the Bain office, sometimes in fast-paced and evolving environments

If you're ambitious and energized by working with exceptional people, Bain is an exciting place to launch and grow your career.

COMPENSATION:

For all locations, the good-faith, reasonable annualized full-time compensation for this role is commensurate with competitive geographic market rates. In some locations, compensation may vary based on several factors including, but not limited to, relevant experience, education, licensure/certifications, training, and skill level.

Bain's comprehensive benefits and wellness programs are designed to support your emotional, physical, and professional needs:

Wellbeing: Health plans for employees and families that go beyond the basics to include mental, emotional, and behavioral health resources, counseling, assistance, and digital wellness tools

Financial Security: Life, accident, disability, as well as tax efficient programs and retirement savings, where applicable, and extras through various expense and office policies

Flexibility: Paid holidays, vacation, personal sick time, flexibility, and accommodation. Plus, flexible breaks and family leave policies

Learning: A culture of mentorship across all roles, and full lifecycle career support, training, tuition, and planning

Compensation for this role in the United States includes base salary, annual discretionary performance bonus, 401(k) plan with an annual employer contribution based on years of service, and Bain's best in class benefits package (details listed above).

The annualized base compensation for first-year Associate Consultants in the United States is \$112,000. This role may also be eligible for other elements of discretionary compensation.

It is unlawful in Massachusetts to require or administer a lie detector test as a condition of employment or continued employment. An employer who violates this law shall be subject to criminal penalties and civil liability.

4. SiFi AI Engineer

About the job

About Us

SiFi is building the next-generation Office of the CFO — a corporate expense management platform that gives accounting teams seamless control over company spending. We let companies issue cards with precise spending restrictions, automate expense workflows, and close books faster. As we scale, AI is becoming core to how we deliver financial intelligence, automation, and trust to our customers.

We are a small, high-ownership team. Everyone builds, everyone ships, and everyone is accountable for outcomes.

About The Role

We are looking for an AI Engineer to join our Data & AI team and help us bring AI-powered automation into the heart of corporate finance. You will work across the full stack — from LLM pipelines and agent workflows to the backend infrastructure and internal tooling that makes them production-ready.

This is a hands-on, end-to-end role. You will own problems from prototype to production — in a domain where financial data is structured, high-stakes, and unforgiving. Getting it wrong has real consequences for real companies. You will work closely with Product, Engineering, Finance, and Operations to build AI features that make a direct impact on how hundreds of companies manage money.

What You'll Do

Design and ship AI-powered features end to end — from prompt engineering and model integration to backend APIs and frontend surfaces.

Build and maintain AI infrastructure for LLM inference, retrieval-augmented generation (RAG), and structured data extraction from financial documents

Develop autonomous agent workflows that automate finance operations such as expense categorization, receipt reconciliation, and policy enforcement

Partner with the Data Engineering team to ensure AI systems are grounded in clean, trusted, and well-modeled financial data.

Build internal tooling and evaluation frameworks to measure, monitor, and improve model performance in production.

Stay close to the state of the art and bring relevant techniques — fine-tuning, tool use, multi-agent orchestration — into SiFi's stack where they create real value

Requirements

Strong engineering fundamentals across backend systems, APIs, and cloud infrastructure — you are comfortable owning the full lifecycle of a production AI feature.

Hands-on experience building with LLMs in production, including prompt design, RAG pipelines, structured extraction, or Agentic systems

Comfort working with financial or compliance-sensitive data, where correctness and audit ability matter

A bias toward shipping — you move fast, make pragmatic trade offs, and iterate based on real-world feedback

Low ego, high ownership: you are as comfortable debugging an edge case as you are proposing a new system architecture

Nice to Have

Familiarity with fin-tech or expense management domains

Prior work at an early-stage startup or in a small, high-velocity team

Benefits

Why SiFi

Work on AI problems that are genuinely hard: financial data is structured, high-stakes, and unforgiving — the opposite of toy problems

Own meaningful surface area from day one on a lean team where your decisions shape the product.

Competitive salary and equity

Flexible working environment

A front-row seat to building a category-defining fin-tech from the ground up

5. AI Watania Information Systems (Wisys)

AI Developer

About the job

AIWatania Information Systems is looking for a talented AI Developer to join our innovative team. In this role, you will be responsible for designing and developing advanced AI solutions that empower our clients to leverage data for improved decision-making. You will work closely with data scientists and software engineers to create machine learning models, enhance existing algorithms, and deploy AI-driven applications that solve real-world problems. Your expertise in artificial intelligence and machine learning will be critical in driving our initiatives forward and helping us maintain a competitive edge.

Requirements

Key Responsibilities

3 years' experience in AI/ML delivery (production preferred)

Strong Python + ML/DL frameworks (PyTorch/TensorFlow)

Solid ML/DL fundamentals + evaluation metrics + data preprocessing

LLM integration with Groq/OpenAI/Claude, building RAG, prompt engineering + guardrails

SQL + Pandas/NumPy, API development (REST), Docker/CI-CD basics

Nice to Have: Vector DBs, MLflow/W&B, ONNX/quantization, Triton/TorchServe, cloud/on-prem observability

6. Confidential
About the job
AI Agent Engineer

We are looking for a talented AI Agent Engineer to design, build, and scale intelligent AI agents within a dynamic enterprise environment. You will play a key role in developing multi-agent systems, integrating AI capabilities with business data, and driving advanced automation and analytics solutions.

Key Responsibilities

Design, develop, and maintain intelligent AI agents and workflows

Build scalable multi-agent systems for business and analytics use cases

Integrate AI models (LLMs) with enterprise platforms and APIs

Develop and optimize prompting strategies and AI pipelines (RAG, tool usage, etc.)

Collaborate with cross-functional teams to translate business needs into AI solutions

Monitor system performance, reliability, and cost efficiency

Requirements

Experience 3–5 years of experience in AI, software engineering, or related fields

Hands-on experience building AI applications or LLM-based systems

Technical Skills

Strong proficiency in Python (required)

Experience with AI frameworks such as LangChain, LangGraph, CrewAI, or similar

Experience with cloud AI platforms such as AWS, Azure, or OpenAI

Solid understanding of APIs, system integration, and data pipelines

Familiarity with Docker, Git, and modern development practices

Preferred Qualifications

Experience with vector databases and RAG architectures
Knowledge of data platforms and analytics tools
Exposure to enterprise AI environments

What We Offer

Opportunity to work on cutting-edge AI technologies
Exposure to enterprise-scale AI systems
Collaborative and innovative work environment
Professional growth and development opportunities

7. Cognizant Software Engineer

About the job

We are looking for fresh graduates with a bachelor's degree in Software Engineering or Computer Engineering. The ideal candidate will be responsible for developing high-quality applications, as well as designing and implementing testable and scalable code.

Responsibilities

- Develop quality software and web applications
- Analyze and maintain existing software applications
- Design highly scalable, testable code
- Discover and fix programming bugs

Qualifications

- Bachelor's degree in computer science
- Development experience with programming languages
- SQL database or relational database skills

8. TestCrew | Quality Engineering & Software Testing

Artificial Intelligence Engineer

About the job

Job Summary

We are looking for an AI Developer to build intelligent applications and AI-powered solutions that enhance business operations and user experiences. The ideal candidate will have experience developing AI integrations, conversational systems, machine learning workflows, and automation solutions using modern AI tools and frameworks.

Key Responsibilities

- Design and develop AI-powered applications and services.
- Integrate AI models, LLMs, and conversational workflows into enterprise systems.
- Build APIs and backend services supporting AI integrations.
- Develop intelligent automation and data-processing solutions.
- Collaborate with engineering teams to integrate AI capabilities into products.
- Optimize AI workflows for scalability, reliability, and performance.
- Research and evaluate emerging AI technologies and frameworks.

Required Skills

- Proficiency in Python or Java.
- Experience with AI/ML frameworks and APIs.
- Understanding of prompt engineering and AI workflows.
- Experience building backend APIs and distributed systems.
- Knowledge of cloud services and containerized deployments.

Preferred Qualifications

- Experience with LLMs, vector databases, or AI agents.
- Familiarity with LangChain, OpenAI APIs, or Hugging Face.
- Knowledge of event-driven architectures and real-time systems

9. aramco digital Pre-Sales Engineer

About the job

Overview:

The Pre-Sales Engineer supports the development of technically sound and scalable solutions during the sales cycle. Working under the guidance of senior Pre-Sales Engineers and the Vertical Executive, the role assists in opportunity shaping, technical documentation, customer demonstrations, and solution validation.

This role provides foundational exposure to customer engagement, solution architecture principles, and CTPO product and platform standards.

Key Responsibilities:

- Assist in translating customer requirements into structured technical inputs.
- Support preparation of solution diagrams, architecture overviews, and documentation.
- Document assumptions, dependencies, and solution boundaries.
- Ensure alignment with CTPO platforms and approved standards under supervision.
- Contributes to technical responses for RFPs and RFQs.
- Assist in demos, Proof of Concepts (POCs), and technical workshops.
- Collaborate with Sales, Delivery, and CTPO teams for solution validation.
- Support documentation for smooth handover to Delivery post-award.
- Maintain organized records of opportunity-related technical artifacts.
- Support preparation of presentation materials and technical content.
- Capture customer technical requirements and action items.
- Support preparation of compliance matrices and supporting documentation.
- Assist in basic solution sizing and effort estimation exercises

Qualifications:

Education:

- Bachelor's Degree in Computer Science, Engineering, Information Systems, or related field.

Experience:

- 0+ years of experience in technical sales, consulting, or solution support.

Skills & Competencies:

- Strong attention to detail
- Good communication and presentation skills
- Analytical thinking and structured approach
- Ability to complete assigned tasks independently over time

Requirements added by the job poster

- Bachelor's Degree
- Commute to this job's location

10. Jobgether

AI Research Engineer - Reinforcement Learning

About the job

This position is posted by Jobgether on behalf of a partner company. We are currently looking for an AI Research Engineer - Reinforcement Learning in Saudi Arabia.

This is an exciting opportunity to work at the forefront of artificial intelligence research, developing advanced reinforcement learning systems designed for real-world applications. The role focuses on building intelligent, adaptive AI models capable of optimizing decision-making across dynamic and complex environments. As part of a globally distributed research team, you will contribute to cutting-edge experimentation involving large-scale reinforcement learning, multi-modal architectures, and resource-efficient AI systems. You will collaborate closely with researchers, engineers, and cross-functional teams to design, test, and deploy innovative RL algorithms that push the boundaries of model performance and scalability. The position combines deep technical research with hands-on implementation, making it ideal for professionals passionate about solving complex AI challenges. This role offers the opportunity to shape next-generation AI capabilities within a highly innovative, remote-first environment.

Accountabilities

Design, develop, and implement advanced reinforcement learning algorithms to optimize decision-making processes across simulated and real-world environments.

Build, execute, monitor, and evaluate large-scale reinforcement learning experiments while tracking key performance indicators and benchmark results.

Develop and curate high-quality simulation environments and training datasets tailored to domain-specific reinforcement learning challenges.

Optimize reinforcement learning pipelines by identifying and resolving issues related to exploration strategies, policy divergence, reward signal instability, and computational efficiency. Improve policy performance, convergence stability, and sample efficiency through advanced optimization techniques and iterative experimentation.

Collaborate with engineering and research teams to integrate reinforcement learning agents into production systems and real-world applications.

Define measurable success metrics and continuously monitor deployed RL systems to ensure robustness, scalability, and sustained performance improvements.

Contribute to ongoing AI research initiatives by exploring innovative RL methodologies, model architectures, and training frameworks.

Document experimental findings, technical approaches, and research outcomes to support knowledge sharing and continuous innovation.

Requirements

Degree in Computer Science, Artificial Intelligence, Machine Learning, or a related field; PhD preferred.

Strong research background in reinforcement learning, machine learning, NLP, or AI-related disciplines with proven contributions to advanced AI research initiatives.

Hands-on experience conducting large-scale reinforcement learning experiments, including online RL methods such as Group Relative Policy Optimization (GRPO).

Deep understanding of reinforcement learning concepts including policy gradients, actor-critic methods, GRPO, exploration-exploitation tradeoffs, and policy optimization techniques.

Strong expertise in PyTorch and reinforcement learning frameworks, including experience building end-to-end RL pipelines.

Experience developing, training, evaluating, and deploying reinforcement learning systems in production or large-scale research environments.

Proven ability to solve complex RL challenges such as sample inefficiency, training instability, reward optimization, and convergence issues.

Experience working with multi-modal AI systems and resource-efficient model architectures is considered a strong advantage.

Strong analytical, problem-solving, and experimentation skills with a research-driven mindset.

Excellent communication and collaboration abilities within distributed and cross-functional teams.

Benefits

Fully remote work environment with global collaboration opportunities.

Opportunity to work on cutting-edge AI and reinforcement learning technologies.

Exposure to advanced multi-modal architectures and large-scale AI research initiatives.

Flexible and innovation-focused work culture that encourages experimentation and continuous learning.

Collaboration with highly skilled international AI researchers and engineers.

Opportunity to contribute to impactful AI systems with real-world applications.

Career growth opportunities within a rapidly evolving global technology environment.

Dynamic and fast-paced setting focused on innovation, research excellence, and technical ownership.

How Jobgether Works

We use an AI-powered matching process to ensure your application is reviewed quickly, objectively, and fairly against the role's core requirements. Our system identifies the top-fitting candidates, and this shortlist is then shared directly with the hiring company. The final decision and next steps (interviews, assessments) are managed by their internal team.

We appreciate your interest and wish you the best!

Why Apply Through Jobgether?

Data Privacy Notice: By submitting your application, you acknowledge that Jobgether will process your personal data to evaluate your candidacy and share relevant information with the

hiring employer. This processing is based on legitimate interest and pre-contractual measures under applicable data protection laws (including GDPR). You may exercise your rights (access, rectification, erasure, objection) at any time.

We may use artificial intelligence (AI) tools to support parts of the hiring process, such as reviewing applications, analyzing resumes, or assessing responses. These tools assist our recruitment team but do not replace human judgment. Final hiring decisions are ultimately made by humans. If you would like more information about how your data is processed, please contact us.

11. Al Watania Information Systems (Wisys).

Associate Consultant - SAP

About the job

Al Watania Information Systems is seeking a proactive and detail-oriented Associate Consultant to join our team. In this role, you will support the implementation and maintenance of SAP solutions to help our clients improve their business processes. You will work closely with senior consultants and project teams to deliver high-quality service and ensure successful project outcomes. This is an excellent opportunity for individuals aiming to build a strong foundation in SAP consulting within a professional environment.

Key Responsibilities

- Assist with gathering and analyzing business and technical requirements
- Support the configuration, testing, and deployment of SAP modules
- Collaborate with clients and team members to resolve issues and implement enhancements
- Prepare documentation, reports, and user manuals to support SAP solutions
- Provide end-user training and ongoing support as needed
- Stay current with SAP technologies and best practices

Requirements

- Bachelor's degree in Computer Science, Information Systems, Business Administration, or related field
- Fresh graduate or up to 1 year of experience
- Basic understanding of SAP modules and business processes
- Strong analytical and problem-solving skills
- Good communication and interpersonal skills for client interaction
- Ability to work effectively both independently and in a team environment
- Willingness to learn and adapt to new SAP technologies
- SAP certification or relevant training is an advantage

Benefits

- High Category Medical Insurance coverage
- Exposure to high-impact, multi-industry client projects across Saudi Arabia
- Work within a dynamic and growing SAP practice
- Opportunities for professional development and career progression

12. Knight Frank MENA Saudi Graduate Programme

About the job Overview

We are seeking enthusiastic and talented individuals with a passion for real estate to join our graduate programme in Saudi Arabia. We are looking to nurture recent graduates with a flexible attitude and variable skill set by providing on-the-job training and a pathway towards a career in real estate.

During the programme, candidates will join one of the various service lines at Knight Frank as an intern, gaining exposure to real estate valuation, strategy, consultancy and/or transactional services.

Upon successful completion of this introductory internship period, select candidates will be offered a place in Knight Frank's graduate programme, lasting a minimum of 2 years.

Our graduate programme allows participants to access a career alongside a focused real estate education, with successful participants obtaining a Master's degree qualification in real estate from a UK based university and a pathway to qualify as a Chartered Surveyor with the Royal Institution of Chartered Surveyors (RICS). Knight Frank will support participants through the Assessment of Professional Competence (APC) process to qualify as a Chartered Surveyor, the most recognized qualification in real estate. The Master's degree and APC costs will be funded by Knight Frank on the basis that the candidate will commit to staying with the firm for a period following successful completion of the graduate programme.

This is the first programme of this nature in Saudi Arabia, and it will provide unparalleled learning opportunities for the right candidate. Studying for a Master's degree as well as fulfilling the obligations of the working day will be challenging, and as such we will only consider the most determined candidates.

This unique programme is open to nationals of Saudi Arabia only.

Responsibilities

Willingness to learn and understand the Real Estate Market, and the Knight Frank business

Fulfill instructions within agreed guidelines to achieve agreed business targets.

Collect, analyze, and interpret data to provide actionable insights for strategic decision-making.

Conduct research on various topics, market trends, and industry benchmarks.

Organize, update and maintain confidential files, databases and reports, ensuring accurate and up-to-date records.

Assist in the preparation of documents, presentations, and reports for internal and external stakeholders.

Assist other departments and develop new skills to broaden your learning experience and career path.

Undertake the efficient administration of all procedures in carrying out business.

Network with peers and supervisors. Gain internal/external support for analysis and conclusions.

Build and maintain goodwill, confidentiality and trust with prospective and existing clients at all times in order to foster the professional image of the Partnership.

Communicate fully with all stakeholders concerned to ensure that work is managed in an efficient and professional manner.

Other tasks as required.

Skills and Qualifications

Willing to join our graduate scheme; an initial internship followed by a full-time graduate position alongside a Master's degree programme in Real Estate, from a UK based University, and to undertake the APC exam to become chartered through the Royal Institution of Chartered Surveyors.

Bachelor's degree in Finance, Engineering, Business, Urban Planning or a related field with a minimum GPA of 3.65 or equivalent.

Excellent interpersonal and communications skills.

Strong organizational and problem-solving abilities.

Ability to take initiative and work proactively through periods of high workload.

Attention to detail and a high level of accuracy.

Strong team player with the ability to build relationships.

Understanding of regional business culture and regulations.

The ability to understand and make use of computers, information technology and internal systems.

Microsoft Office programme to a proficient level.

Bilingual Arabic and English, written and verbal. IELTS score of 6.5 or above required.

Flexible attitude towards travelling.

13. Tata Consultancy Services Gen AI Engineer

About the job

Job Title – Gen AI Engineer

Company – TCS (MEA)

Location – Dhahran, Saudi Arabia

Job type – Full time

About Us :

Tata Consultancy Services (TCS) is an IT services, consulting and business solutions organization that has been partnering with many of the world's largest businesses in their transformation journeys for over 50 years. TCS offers a consulting-led, cognitive powered, integrated portfolio of business, technology and engineering services and solutions. This is delivered through its unique Location Independent Agile™ delivery model, recognized as a benchmark of excellence in software development.

A part of the Tata group, India's largest multinational business group, TCS has over 616,171 of the world's best-trained consultants with 157 nationalities in 53 countries. For more information, visit www.tcs.com and follow TCS news at @TCS_News.

Job Description:

Technical Skills:

Strong foundation in deep-learning mathematics (linear algebra, probability, optimization)

Expert in PyTorch and/or TensorFlow.

Mastery of Hugging Face Transformers/Diffusers and ability to write custom CUDA kernels

Experience with distributed training on GPU/TPU clusters.

Proficiency with prompt-engineering tools (LangChain, LlamaIndex).

RAG expertise: building vector stores, hybrid retrieval, and multi-agent orchestration.

MCP server knowledge: designing, deploying, and scaling services that manage agent communication and state (REST/gRPC, message queues, load balancing).

MLOps stack: Docker, Kubernetes, Helm, CI/CD, Triton/TensorRT-Inference Server, Prometheus, Grafana.

Large-scale data pipelines (Spark, Beam, Dask) and data versioning (LakeFS, DVC, Weights & Biases).

Publications or patents in generative AI (NeurIPS, ICML, ICLR, CVPR).

Open-source contributions to major libraries (Hugging Face, PyTorch, Diffusers).

Domain expertise in finance, healthcare, gaming, or creative media.

Thank you for your interest in applying for this position with TCS. We will review your application and will get back to you if we are considering your interest in this opportunity.

Application Deadline: 31-Mar-2026

Infinite pl

2026 KSA Analyst Program - Data & AI Analyst

About the job

Infinite pl is a digital-led tech firm driven to become a digital logistics pioneer by harnessing the power of people, data, and platforms. We are enabled through in-house, external, network, and investment capabilities that we utilize to orchestrate and build innovative platforms tackling complex problems within logistics and adjacent sectors.

Infinite pl's mission is nothing short of a logistics revolution! We're here to enrich the experiences of governments, businesses, and residents around the world through cutting-edge digital solutions.

We're not just players; we're game-changers.

Role Summary:

As Data & AI Analyst, you will collaborate with our team of experts to analyze and interpret complex data sets, using cutting-edge AI algorithms and techniques. You will have the chance to work on a variety of projects, ranging from developing machine learning models to enhance our products, to implementing AI solutions for our clients. This is an exciting opportunity for someone who is eager to make an impact in the AI industry and contribute to the development of groundbreaking technologies.

Responsibilities:

- Assist in the design, development, and implementation of AI algorithms and models
- Conduct research and analysis to identify trends and patterns in large data sets
- Collaborate with cross-functional teams to gather requirements and define project objectives
- Evaluate and validate AI models, ensuring their accuracy and reliability
- Provide insights and recommendations based on data analysis
- Stay up-to-date with the latest AI techniques and technologies through continuous learning and professional development
- Support the deployment and integration of AI solutions into existing systems

Requirements:

- A bachelor's degree in Computer Science, Engineering, or a related field
- Strong knowledge of AI concepts, algorithms, and techniques
- Hands-on experience with programming languages such as Python or Java
- Familiarity with machine learning frameworks such as TensorFlow or PyTorch

Proficient in data analysis and visualization tools, such as MATLAB or Tableau
Excellent problem-solving and analytical skills
Strong communication and collaboration abilities
Attention to detail and the ability to work on multiple projects simultaneously
Experience working in a research or academic environment is a plus
Knowledge of natural language processing or computer vision is a plus

Infinite pl  - where innovation meets logistics, and the journey is Infinitely boundless!

Let's disrupt logistics together and explore infinite opportunities!

We may use artificial intelligence (AI) tools to support parts of the hiring process, such as reviewing applications, analyzing resumes, or assessing responses. These tools assist our recruitment team but do not replace human judgment. Final hiring decisions are ultimately made by humans. If you would like more information about how your data is processed, please contact us.

HALA

AI Engineer (All Levels)

About the job
Who Are We

HALA is a leading fintech player in the MENAP region that aims to redefine financial services and build the future bank of SMEs. HALA aims at empowering SMEs to start, run, and grow their businesses by providing them with cutting-edge financial and technological tools.

HALA currently holds multiple entities in UAE, Saudi Arabia and Egypt (including HALA Payments and HALA Logistics) and offers solutions that enable merchants to digitize their payments as well as manage their sales and operations.

Founded in 2017, HALA is currently licensed by the Saudi Arabian Central Bank.

Key Responsibilities

- Develop and deploy AI, machine learning, and generative AI solutions.
- Build AI-powered tools such as chatbots, copilots, and workflow automation.
- Prepare and process data for model training, testing, and deployment.
- Integrate AI models into products and internal systems through APIs.
- Fine-tune, evaluate, and monitor model performance.
- Work closely with Product, Engineering, Data, and business teams to identify AI use cases.
- Ensure AI solutions follow data privacy, security, and governance standards.
- Document AI models, workflows, and technical designs.

Requirements

- Bachelor's degree in Computer Science, AI, Data Science, Software Engineering, or related field.
- 2–5 years of experience in AI, machine learning, data science, or software engineering.
- Strong Python programming skills.
- Experience with machine learning frameworks such as PyTorch, TensorFlow, or Scikit-learn.
- Knowledge of LLMs, NLP, embeddings, vector databases, and RAG.
- Experience with APIs, cloud platforms, and production deployment.
- Strong problem-solving and collaboration skills.

Preferred

- Experience with OpenAI, Azure OpenAI, AWS Bedrock, or Google Vertex AI.
- Experience with LangChain, LlamaIndex, Pinecone, FAISS, or similar tools.
- Experience in fintech, banking, payments, or regulated environments.

What We Offer You

We believe you will love working at HALA!

We have an inclusive and diverse culture that encourages innovation and flexibility in remote, in-office, and hybrid work setups.

We offer highly competitive compensation packages, including the potential for shares.

We prioritize personal development and offer regular training and an annual learning stipend to tackle new challenges and grow your career in a hyper-growth environment.

Join a talented team of over 30 nationalities working in 7 countries and gain valuable experience in an exciting industry.

We offer autonomy, mentoring, and challenging goals that create incredible opportunities for both you and the company.

You will be given a lot of responsibility and trust. We believe that the best results come when the people responsible for a function are given the freedom to do what they think is best.

If you think you have what it takes to join a remarkable team [#apply_now](#)

RER | السجل العقاري

SAED GDP

About the job

Job Opportunity:

At RER | السجل العقاري, we believe in shaping the future by investing in exceptional talent. The SAED Program is a 12-month immersive journey designed to develop high-potential graduates into future-ready professionals, contributing to the advancement of the real estate ecosystem in the Kingdom.

Throughout the program, participants will:

- Engage in a structured development journey combining practical experience, targeted training, and real business exposure.
- Contribute to high-impact projects and strategic initiatives that drive tangible value to the organization.
- Gain cross-functional exposure through rotations across key departments, building a holistic understanding of the business.
- Collaborate with diverse teams to strengthen critical thinking, problem-solving, and decision-making capabilities.
- Receive continuous mentorship and coaching from senior leaders and industry experts.
- Analyze data, generate insights, and support decision-making to drive continuous improvement.
- Develop agility and adaptability within a dynamic and evolving work environment.
- Complete structured performance evaluations aligned with key program milestones.

Qualifications:

Bachelor's degree or above in the below areas:

Business Administration, Human Resources, Engineering, Computer Science, Finance, Cybersecurity, Law, Marketing, MIS, GIS, Operation and Project Management, Geology.

Acceptance Criteria:

Bachelor's or master's degree
GPA (4 of 5 OR 3 of 4)
IELTS 6 and above
Fresh Graduate

Program Benefits:

Employment Contract
Monthly Salary
Medical Insurance
Coaching Sessions
Intensive Training Program
Certificate of Completion

Benefits found in job post

Medical insurance

Job Description:

Technical Skills:

Develop and deploy machine learning and deep learning models for time series forecasting, NLP, and sensor/IoT data analysis.

Fine-tune and deploy state-of-the-art (SOTA) models, including LLMs, using frameworks like HuggingFace, and methods like LoRA, Q-LoRA, and full model fine-tuning.

Implement and evaluate bagging and boosting models (e.g., XGBoost, LightGBM, CatBoost) for structured and sensor data.

Design and optimize neural network architectures, including CNNs, RNNs, Transformers, and attention-based models using PyTorch.

Build and evaluate model performance using appropriate metrics and validation strategies.

Work with smart sensor data and IoT systems, extracting features and building predictive models for anomaly detection, failure prediction, and optimization.
Develop and expose model inference as REST APIs using FastAPI or similar web frameworks.
Collaborate with DevOps and engineering teams to operationalize models using Docker, CI/CD pipelines, and cloud platforms.
Maintain and improve data pipelines, feature engineering, and model monitoring in production environments.

Thank you for your interest in applying for this position with TCS. We will review your application and will get back to you if we are considering your interest in this opportunity.

Application Deadline: 31-May-2026

Sanad Connect

Artificial Intelligence Solutions Consultant

About the job

Job Brief

We are hiring on behalf of our client, a startup company based in Jeddah delivering AI solutions for businesses (B2B). The company focuses on helping organizations adopt AI in a practical, scalable, and value-driven way, translating advanced technology into measurable business outcomes.

The AI Solutions Consultant is a senior, executive-facing role that operates as an internal and external advisor. The position bridges business strategy, AI solution design, and delivery alignment. The role also carries commercial ownership related to the solutions and client accounts it supports, ensuring long-term value creation, solution success, and account growth.

Key Responsibilities

Strategic Client Advisory

Act as a trusted advisor to senior and executive stakeholders.

Lead structured discovery discussions to understand business objectives, challenges, and priorities.

Identify and shape AI use cases aligned with strategic and operational goals.

Solution & Commercial Ownership

Own the solution definition from a business and commercial perspective.

Ensure clarity and alignment between solution scope, value, and commercial expectations.

Support deal shaping, solution positioning, and executive decision-making.

Maintain responsibility for the commercial performance of supported solutions and client accounts.

Identify opportunities for account growth, renewals, and additional solution adoption.

Cross-Functional Leadership

Collaborate closely with AI engineers and product teams to ensure solution feasibility and scalability.

Support solution demonstrations, executive presentations, and strategic workshops.

Contribute to proposals, solution documentation, and client-facing narratives.

Delivery Alignment

Support client onboarding and early engagement phases.

Ensure alignment between proposed outcomes and delivery execution.

Build long-term client relationships through continuous advisory support.

Experience & Skills

Minimum of 8 years of professional experience in consulting, solutions, advisory, or similar client-facing roles within B2B environments.

Strong background in senior consulting, solutions, or advisory roles.

Proven experience engaging with senior management and executive stakeholders.

Exposure to commercial responsibility related to solutions, accounts, or engagements.

Strong business acumen with the ability to connect AI capabilities to measurable outcomes.

Ability to simplify complex technical concepts for executive audiences.

Comfortable operating in startup or high-growth environments.

Exposure to AI, data, analytics, automation, or advanced digital solutions is a strong advantage.

Requirements added by the job poster

- 6+ years of work experience with Artificial Intelligence (AI)

Sanad Connect

Artificial Intelligence Engineer

About the job

Job Brief

We are hiring on behalf of our client, a startup company based in Jeddah specializing in AI solutions for businesses (B2B). The company is focused on building scalable, practical, and high-impact AI-driven products that address real-world business challenges across multiple industries.

The Artificial Intelligence Engineer will be responsible for designing, developing, and deploying machine learning and AI solutions that are production-ready and performance-driven. This role requires strong technical expertise, hands-on development experience, and the ability to work collaboratively in a fast-paced startup environment.

Key Responsibilities

Design, develop, and implement AI and machine learning models for business-focused use cases.

Build, train, evaluate, and optimize models involving pattern recognition, neural networks, and natural language processing (NLP).

Develop end-to-end AI pipelines, from data preprocessing and experimentation to production deployment.

Work with structured and unstructured data to deliver scalable and reliable AI-driven solutions.

Collaborate closely with cross-functional teams to translate business requirements into technical implementations.

Analyze model performance and continuously improve accuracy, efficiency, and system scalability.

Refine and enhance existing algorithms to improve robustness and business impact.

Stay current with advancements in AI and machine learning and contribute to innovative product development.

Qualifications & Experience

Strong foundation in Computer Science, including algorithms, data structures, and software engineering principles.

Hands-on experience with machine learning techniques, pattern recognition, and neural networks.

Proven experience developing and implementing Natural Language Processing (NLP) solutions.

Proficiency in programming languages such as Python, Java, or C++.

Experience using AI and ML frameworks such as TensorFlow, PyTorch, or similar tools.

Solid understanding of data preprocessing, model training, evaluation, and deployment workflows.

Strong analytical and problem-solving skills, with the ability to work effectively in a team environment.

Experience building AI solutions for real-world business applications (beyond academic or research projects).

Prior experience working in a startup or fast-paced environment is a strong advantage.

Education

Bachelor's or Master's degree in Computer Science, Artificial Intelligence, or a related field.

Location

Jeddah, Saudi Arabia

Requirements added by the job poster

- 2+ years of work experience with Machine Tools

Hire Feed

Software Engineer

About the job

About Joveo:

Every company says they're "AI-first." We actually are. Joveo's recruitment advertising platform processes millions of hiring decisions through machine learning, real-time bidding, and predictive analytics — helping the world's largest employers find the right people, faster and fairer. But we're not done. Not even close.

Role Overview:

We are hiring a Software Engineer to design, build, and maintain scalable software systems that power our global recruitment advertising infrastructure. You will collaborate with cross-functional teams to ship high-quality, production-grade code across the full development lifecycle.

Key Responsibilities:

- Design, develop, and maintain backend and/or frontend software systems
- Write clean, tested, and well-documented code aligned with team standards
- Participate in architecture discussions and contribute to technical decisions
- Debug and resolve production issues with speed and precision
- Collaborate with product, design, and data teams in agile sprint cycles

- Conduct and participate in code reviews to maintain engineering quality

Required Skills & Qualifications:

- Proficiency in one or more programming languages (e.g., Python, Java, Go, JavaScript)
- Experience building and maintaining scalable, distributed systems
- Solid understanding of data structures, algorithms, and system design
- Familiarity with cloud platforms (AWS, GCP, or Azure)
- Experience with version control systems (Git) and CI/CD pipelines
- Strong problem-solving skills and a collaborative engineering mindset

Equal Opportunity Employer:

Joveo is an equal opportunity employer. We are committed to building an inclusive workplace and welcome applications from all qualified individuals regardless of race, color, ethnicity, nationality, gender, gender identity or expression, sexual orientation, age, religion, disability, marital status, or any other characteristic protected by applicable law. All hiring decisions are made solely on the basis of qualifications, skills, and demonstrated ability.

If your dream job is one that doesn't fit neatly into a job title — apply.

Joveo. Where AI meets the future of work.

SAB Invest
Alawael Graduate Development Program 2026

About the job

Begin your professional journey in investment and financial services with the Alawael Program 2026. a 12-month structured graduate development program designed to cultivate future industry leaders.

Program Objectives:

- Develop strong foundations in financial markets, investment analysis, and portfolio management
- Enhance analytical thinking, risk assessment, and strategic decision-making capabilities
- Prepare high-potential graduates for impactful careers within the investment sector

What the program offers:

- A comprehensive learning experience combining formal training and practical, hands-on exposure
- Rotational assignments across key investment functions
- Continuous mentorship from experienced professionals
- Exposure to asset management, investment advisory, and client services

Benefits:

- Competitive monthly reward

- Medical insurance coverage
- Personal and professional development opportunities
- GOSI enrollment
- On-the-job training
- Annual paid leave

Requirements:

- Recently graduated (Class of 2025–2026)
- Bachelor's or Master's degree in a relevant major:
 - Business Administration
 - Finance & Investment
 - Accounting
 - Marketing
- Minimum GPA: 3.0/4.0 or 4.0/5.0
- Full-time commitment for 12 months

Apply now or share with qualified candidates.

Master Works

Machine Learning & AI Engineer - Immediate Hiring

About the job

Key Responsibilities

AI & Machine Learning Development

Develop text-based models and process both structured and unstructured data.

Design and implement machine learning and deep learning models for specific business applications.

Improve machine learning algorithms to enhance performance and accuracy.

Apply deep learning frameworks such as TensorFlow and PyTorch to build and deploy neural networks.

Data Management & Feature Engineering

Manage and process large datasets, including cleaning, transforming, and extracting relevant features for model training.

Ensure data accuracy, consistency, and reliability through data quality checks and validation.

Develop and implement methods to improve data integrity, efficiency, and overall data quality.

MLOps, Deployment & Monitoring

Use MLOps tools and practices to monitor, optimize, and deploy AI solutions.

Develop A/B Testing mechanisms, model quality assessments, and hypothesis validation.

Evaluate machine learning models and ensure they meet performance expectations.

Technical Support & Collaboration

Translate business data needs into clear technical system requirements.

Provide training and technical support to end users on how to effectively use machine learning models.

Collaborate with cross-functional teams including business analysts and IT specialists to ensure smooth integration of advanced analytics.

Documentation & Security

Prepare all required technical documentation according to organizational standards.

Implement security measures to protect sensitive data and manage appropriate access levels for machine learning systems and models.

Innovation & Continuous Improvement

Evaluate and recommend new tools and methods that enhance AI and machine learning capabilities.

Support advanced analytics initiatives to uncover innovative insights.

Requirements

Qualifications

Bachelor's degree in Computer Science, Artificial Intelligence, Data Analytics, or related field.

4+ years of experience in machine learning and deep learning.

Certifications in data analytics or machine learning systems.

Practical experience with:

SAS

Dataiku

Experience in both public and private sectors, preferably within Saudi Arabia.

Strong background in data analytics and delivering multiple projects in the same field.

Ability to work collaboratively with multi-functional teams to ensure seamless integration of advanced analytics.

Required Skills

Strong expertise in ML and deep learning algorithms.

Excellent data analysis and feature engineering skills.

Strong understanding of MLOps frameworks.

Excellent communication skills and the ability to produce high-quality technical documentation

UMATR

Lead AI Engineer (Saudi National's)

About the job

Title: Lead AI Engineer – LLMs, Recommendation & Real Estate Automation

Tech Stack: Python, FastAPI, Docker, Cloud (AWS/Azure/GCP), LLMs, RAG Systems, Recommendation Engines, Data Pipelines, Prompt Engineering

What You'll Do:

You will lead the development of AI systems that transform real estate transactions. Your work will power:

Intelligent chat agents that negotiate deals and assist tenants and landlords in real-time.

Recommendation systems that match tenants to the right units and suggest the best listings for landlords.

Pricing engines that provide data-driven market insights, helping both parties price units accurately.

Tools that make adding and discovering listings seamless, creating a personalized and intelligent platform experience.

You'll design and deploy production-ready LLMs, multi-agent systems, and AI pipelines, ensuring scalability, reliability, and measurable impact. You will also mentor and guide the AI team, set technical standards, and define frameworks to accelerate innovation.

Who They Are:

This is an innovative, tech-driven real estate platform focused on simplifying property transactions. They combine data intelligence with smart automation to reimagine how tenants find homes and landlords manage listings. The team is lean, ambitious, and looking to leverage AI to drive real-world impact in a high-growth market.

Benefits:

Salary up to 50k SAR

Opportunity to lead AI initiatives and shape product direction.

Work with cutting-edge AI technologies, LLMs, and data-driven real estate systems.

Growth into strategic AI leadership roles within the company.

Requirements:

Proven experience leading AI projects, ideally involving LLMs, RAG pipelines, or multi-agent systems.

Hands-on experience with Python, FastAPI, Docker, cloud deployment, and AI/ML pipelines.

Experience building recommendation systems, personalized search, or pricing models.

Strong understanding of model evaluation, optimization, and production deployment.

Ability to mentor engineers and define technical standards for AI development.

Comfortable collaborating across product, data, and engineering teams.

Passion for applying AI to real-world problems and exploring innovative solutions.

Ninja  نینجا

Business Intelligence Analyst

About the job

Position Overview:

The Business Intelligence Analyst at Ninja will be instrumental in transforming data into actionable insights. You will collaborate with cross-functional teams to analyze complex data sets, develop comprehensive reports, and design interactive dashboards that drive strategic decision-making across the organization.

Key Responsibilities:

Gather and analyze data from various internal and external sources to identify trends and patterns that can inform business decisions

Create and maintain intuitive and interactive dashboards and reports that visualize key data points

Work closely with stakeholders to understand their analytical needs and translate them into analytical solutions

Perform market research and data forecasting to support business strategies and objectives

Support the development of reporting standards and best practices across the organization

Monitor data quality and integrity, conduct data audits, and troubleshoot data inconsistencies

Provide training and support to team members in analytical tools and data interpretation

Requirements

Bachelor's degree in computer science, Data Science, Business Administration, or a related field

2+ years of experience in business intelligence, data analysis, or a related field

Proficiency in BI tools (e.g., Tableau, Power BI) and SQL

AI experience a plus

Strong analytical and problem-solving skills

Excellent communication skills with the ability to convey complex information clearly

Experience with data visualization best practices

Ebra | إبراء
QA Engineer

About the job

We are looking for a QA Engineer who can own quality across modern web applications and cloud native backend services.

What You'll Do:

Design and execute test strategies for web apps (Next.js), APIs (Node.js/Python), and service integrations

Build and maintain scalable automated test suites (UI, API, integration, regression, and smoke tests)

Partner with developers and product teams to define acceptance criteria and shift quality left

Validate deployments across environments and support release readiness in CI/CD pipelines

Identify flaky tests, production risks, and root causes; drive preventive quality improvements

Track quality metrics (defect leakage, test coverage, escape rate, pass/fail trends) and provide actionable insights

Requirements

Bachelor's degree in Computer Science Information Technology, or a related field)

3+ years in QA/Software Testing, with strong automation experience.

Hands-on testing experience with JavaScript/TypeScript applications, especially Next.js and Node.js

Experience testing Python-based services and API-driven systems

Strong API testing skills (REST/trpc, authentication, contract validation, and edge case coverage

Proficiency with modern testing tools (e.g., Playwright/Cypress, Jest/Vitest, Postman/Newman, or similar)

Experience integrating automated tests into CI/CD workflows

Strong debugging skills using logs, traces, and test diagnostics

Solid understanding of SDLC, test design techniques, and risk-based testing

Practical security testing knowledge, including awareness of OWASP Top 10 vulnerabilities and how to validate them in web/API workflows

Nice to Have:

Experience with Kubernetes and GCP environments

Performance and reliability testing experience

Exposure to real time or distributed service architectures

Experience with observability tools for debugging and quality monitoring

Master Works

SDE-1 Computer Vision, Engineer

About the job

Our subsidiary, Nabeh, is seeking an SDE-1 (Computer Vision Engineer) professional to join our team and contribute to the development of advanced AI and computer vision solutions.

Responsibilities

Solve real-world Computer Vision problems using cutting-edge techniques
Design and implement robust, industry-grade algorithms
Utilize OpenCV, Python, and deep learning frameworks for model training
Work with deep learning libraries such as Keras, TensorFlow, and PyTorch
Develop integrations with internal and external microservices
Implement deployment practices using Docker, Kubernetes, and model compression techniques
Research the latest technologies and develop proof of concepts (POCs)
Build and train state-of-the-art deep learning models for:
Object Detection (Mandatory)
Segmentation
Classification
Object Tracking
Visual Style Transfer
Generative Adversarial Networks (GANs)
Collaborate with researchers and engineers to develop and deploy Computer Vision solutions
Plan and execute Computer Vision research projects, defining scope, objectives, and deliverables
Provide specialized technical and scientific research support for ongoing and new AI initiatives

Requirements

Required Skills

C++ (Mandatory)
Python (Mandatory)
Image Processing (Mandatory)
Computer Vision (Mandatory)
Deep Learning (Mandatory)
Object Detection
Machine Learning
Pattern Recognition
Artificial Intelligence (AI)
Data Science
Generative Adversarial Networks (GANs)
Flask

SQL

UMATR

Applied AI/ML Engineer - Gaming (Saudi National's)

About the job

Title: Applied AI engineer - Gaming (Saudi National)

Tech Stack: Python, scikit-learn, TensorFlow or PyTorch, Pandas, NumPy, SQL/NoSQL databases (PostgreSQL, BigQuery, MongoDB), ETL pipelines (Airflow, Prefect), cloud storage (S3, GCS), Docker, Kubernetes, FastAPI/Flask, MLflow/Kubeflow/Vertex AI, AWS/GCP/Azure, Git

What You'll Do:

You'll design, develop, and deploy machine learning models that enhance the player experience for a popular game, including churn prediction, personalization, user engagement optimization, and fraud detection. You'll build and maintain data pipelines to collect, clean, and process large datasets from multiple sources, collaborate with product and engineering teams to integrate AI models into production systems, and implement MLOps practices such as model versioning, monitoring, CI/CD, and retraining pipelines. Additionally, you'll conduct exploratory data analysis to guide model features, optimize models for accuracy and scalability, develop dashboards to communicate insights, and proactively propose innovative AI/ML solutions.

Who They Are:

A fast-growing gaming company focused on delivering a high-quality, engaging experience for players. They combine data-driven insights with cutting-edge AI to create smarter, more personalized gameplay. You'll be part of a team that values innovation, collaboration, and the real-world impact of AI on user engagement.

What Is In It For You:

Benefits:

Work on impactful, real-world AI/ML projects in the gaming industry

Opportunity to own end-to-end ML projects from concept to deployment
Exposure to MLOps, cloud platforms, and scalable AI systems
Professional growth and learning in advanced AI/ML techniques
36k SAR + other benefits

Requirements:

Bachelor's or Master's degree in Computer Science, Data Science, AI, or a related field
4–7 years of hands-on experience in machine learning, data science, or AI engineering
Proven experience delivering end-to-end ML projects from concept to deployment
Strong programming in Python (pandas, NumPy, scikit-learn, TensorFlow or PyTorch)
Solid understanding of ML algorithms (supervised, unsupervised, deep learning)
Hands-on experience with data engineering tools: ETL pipelines (Airflow, Prefect, or custom),
SQL/NoSQL databases, cloud storage (S3, GCS)
Experience with MLOps and production deployment: Docker, Kubernetes, APIs (FastAPI/Flask),
CI/CD for ML (MLflow, Kubeflow, Vertex AI)
Familiarity with cloud platforms (AWS, GCP, Azure ML)
Proficiency in Git and collaborative workflows

Tata Consultancy Services
Gen AI Engineer

About the job
Job Title – Gen AI Engineer

Company – TCS (MEA)

Location – Dhahran, Saudi Arabia

Job type – Full time

About Us :

Tata Consultancy Services (TCS) is an IT services, consulting and business solutions organization that has been partnering with many of the world's largest businesses in their transformation journeys for over 50 years. TCS offers a consulting-led, cognitive powered, integrated portfolio of business, technology and engineering services and solutions. This is delivered through its unique Location Independent Agile™ delivery model, recognized as a benchmark of excellence in software development.

A part of the Tata group, India's largest multinational business group, TCS has over 616,171 of the world's best-trained consultants with 157 nationalities in 53 countries. For more information, visit www.tcs.com and follow TCS news at @TCS_News.

Job Description:

Technical Skills:

Strong foundation in deep-learning mathematics (linear algebra, probability, optimization)

Expert in PyTorch and/or TensorFlow.

Mastery of Hugging Face Transformers/Diffusers and ability to write custom CUDA kernels

Experience with distributed training on GPU/TPU clusters.

Proficiency with prompt-engineering tools (LangChain, LlamaIndex).

RAG expertise: building vector stores, hybrid retrieval, and multi-agent orchestration.

MCP server knowledge: designing, deploying, and scaling services that manage agent communication and state (REST/gRPC, message queues, load balancing).

MLOps stack: Docker, Kubernetes, Helm, CI/CD, Triton/TensorRT-Inference Server, Prometheus, Grafana.

Large-scale data pipelines (Spark, Beam, Dask) and data versioning (LakeFS, DVC, Weights & Biases).

Publications or patents in generative AI (NeurIPS, ICML, ICLR, CVPR).

Open-source contributions to major libraries (Hugging Face, PyTorch, Diffusers).

Domain expertise in finance, healthcare, gaming, or creative media.

Thank you for your interest in applying for this position with TCS. We will review your application and will get back to you if we are considering your interest in this opportunity.

Application Deadline: 31-Mar-2026

Tata Consultancy Services
Data Scientist – Computer Vision Engineer

About the job
Job Title – Data Scientist – Computer Vision Engineer

Company – TCS (MEA)

Location – Dhahran, Eastern, Saudi Arabia

Job type – Full time

About Us :

Tata Consultancy Services (TCS) is an IT services, consulting and business solutions organization that has been partnering with many of the world's largest businesses in their transformation journeys for over 50 years. TCS offers a consulting-led, cognitive powered, integrated portfolio of business, technology and engineering services and solutions. This is delivered through its unique Location Independent Agile™ delivery model, recognized as a benchmark of excellence in software development.

A part of the Tata group, India's largest multinational business group, TCS has over 616,171 of the world's best-trained consultants with 157 nationalities in 53 countries. For more information, visit www.tcs.com and follow TCS news at [@TCS_News](https://twitter.com/TCS_News).

Job Description:

Key Responsibilities:

Design, develop, and deploy computer vision models for processing multiple real-time camera streams.

Build and optimize deep learning pipelines using CNNs, YOLO, Auto-Encoders, Vision-Language Models (VLMs), and OCR models.

Fine-tune and train YOLO, VLM, and OCR models (such as PaddleOCR) for both image and video understanding, including text detection and recognition.

Collaborate with data engineering teams to develop data annotation pipelines and clean large-scale datasets.

Utilize tools such as Label Studio or CVAT for annotation tasks and ensure high-quality labeled data.

Deploy models using NVIDIA DeepStream, Docker, and microservices architecture for scalable production environments.

Develop APIs and backend services using FastAPI for model inference and integration.

Continuously improve model performance through experimentation, evaluation, and feedback loops.

Contribute to the documentation, scaling, and maintenance of vision systems in production.

Preferred Qualifications:

Experience with video analytics, object detection, tracking, segmentation, and scene understanding.

Exposure to edge computing, GPU optimization, and model quantization for real-time deployment.

Familiarity with CI/CD pipelines and MLOps practices in vision systems.

Experience with large-scale vision datasets and data curation tools.

Thank you for expressing interest in this role at TCS. We will review your application and reach out to you if your profile aligns with our requirements for this opportunity.

Application Deadline : 31-Mar-2026

Whiteshield

Whiteshield Data Scientist - AI Economics Unit

About the job

Whiteshield combines AI with economic expertise to solve real policy challenges. In the AI Economics unit, you'll turn data into decisions that shape how governments and businesses set policy, manage resources, and plan for growth.

You'll combine AI, machine learning, geospatial analysis, and economic modelling to extract actionable intelligence from sources like satellite imagery, trade data, and macroeconomic indicators. You'll design and automate data pipelines, power interactive dashboards and rankings, and build strategy tools that deliver measurable impact.

Requirements

We are looking for strong data scientists and technically literate consultants. We ask people to understand a problem, ideate a solution that addresses the core need, build it technically, then communicate it with clarity and confidence. If you are capable of some of that and eager to develop the rest, we encourage you to apply.

Intellectual curiosity, problem-solving drive, and a focus on real-world impact are the priorities

Benefits

Real influence and access - Shape national policy, competitiveness strategies, and sustainable growth plans while working directly with senior government officials, global institutions, and major corporations.

Room to innovate - If you see a better way, try it. We encourage new methods and actively pilot new technologies.

Cutting-edge tools - Work with AI, LLMs, predictive modelling, geospatial analytics, and simulation platforms.

Structured growth - Learn from senior experts through hands-on mentoring and project-based skill transfer.

Strategic Gears Analyst

About the job Qualifications

Fresh Graduates (less than year of experience)
Outstanding academic achievement: Bachelor's/Master's Degree in Business Administration, Strategy, Operation, Finance, Project Management, Engineering, IT, or relevant degrees.
Fluent in both Arabic and English (orally and written)

Skills

Critical thinking and problem-solving skills
Effective time management skills and the ability to multitask
Excellent document development through MS Office
Excellent leadership and communication skills
Strong teamwork and relationship-building abilities
"Roll up your sleeves" attitude
Creative and Curious approaches.

Confidential Government
AI & Machine Learning Engineer

About the job

Key Responsibilities

Develop and deploy AI and machine learning models for real-world business applications
Design and manage data pipelines to support model training and inference
Perform feature engineering and data preparation to improve model performance
Integrate ML solutions into production systems and business platforms
Implement MLOps practices for model deployment, monitoring, and continuous improvement
Collaborate with cross-functional teams to translate business needs into AI solutions

Required Skills

Artificial Intelligence (AI)
Machine Learning (ML)
Python
SQL
TensorFlow / PyTorch
MLOps
Feature Engineering
Data Pipelines
Cloud AI platforms (MS Azure / Copilot / AI Foundry)

Experience

2–4 years of relevant experience in AI / Machine Learning development.

SALIC

Risk Trainee (GDP)

About the job

Graduate Development Program Application Requirements:

Education- Fresh graduates holding a Bachelor's or Master's degree.

- Graduation year 2023 or later.

- Relevant major: Risk Management/Financial Economics.

Skills- Excellent written and verbal communication in (Arabic & English).

Criteria- GPA: 20%

- English Assessment Result: 15%

- Assessment Result: 15%

- Interview Performance: 50%

GPA:- 2.75 out of 4.

- 3.75 out of 5.

Other Requirements- Only Saudi Nationals.

- Equivalency certificate required for degrees obtained from non-Saudi universities.

- Maximum of one (1) year of work experience.

Müller's Solutions

AI / Computer Vision ENGINEER

About the job

As an AI / Computer Vision Engineer at Müller's Solutions, you will have the opportunity to work on cutting-edge projects that leverage artificial intelligence and computer vision technologies. You will collaborate with cross-functional teams to develop innovative solutions that solve complex business challenges using AI and computer vision algorithms and techniques.

Responsibilities:

Design and develop AI and computer vision solutions for various industries and use cases
Implement and optimize computer vision algorithms for object detection, image recognition, and image segmentation

Train and fine-tune machine learning models using large datasets

Collect and preprocess data for training and validation purposes

Integrate AI and computer vision solutions into existing systems and platforms

Perform testing and debugging of AI and computer vision models and systems

Stay current with the latest advancements in AI and computer vision technologies

Building Computer Vision AI models

including all pre-processing and post-processing

Ownership of the Entire Solution

Daily Updates

Knowledge sharing

Requirements

Requirements:

Bachelor's degree in Computer Science, Engineering, or a related field

Proven experience in AI and computer vision development

HANDS ON PYTHON AND DATABASES(SQL AND NOSQL), Open CV

COMFORTABLE WITH LINUX

Experience with data preprocessing and data augmentation techniques

Knowledge of software development practices and version control systems

Excellent problem-solving and analytical skills

Ability to work independently and in a team environment

Good communication and collaboration skills

Huxley
GenAI Specialist

About the job
GenAI Specialist, Dhahran - KSA (6 month initial contract)

In order to be eligible for this contract opportunity you will need to be based in SAUDI ARABIA and have a TRANSFERABLE IQAMA.

Responsibilities:

Building the MCP model, context protocol, agentic AI, and experience in building and maintaining microservices.
Building and deploying machine learning models to detect and prevent financial crimes, achieving a measurable reduction in fraud losses.
Implement Generative AI solutions to generate synthetic data for training, significantly improving model accuracy for given use cases.
Roll out scalable ML systems that process millions of transactions daily, reducing false positives in compliance alerts
Drive the adoption of advanced ML algorithms to identify sanctions evasion patterns, cutting investigation times for compliance teams.
Execute A/B testing on ML-driven compliance tools, achieving a statistically significant boost in operational efficiency
Expertise in model optimization and hyperparameter tuning to achieve high precision and recall in fraud detection and compliance applications.
Analytical Thinking & Problem Solving: Proven ability to dissect complex problems and provide actionable insights in a timely manner.
Strategic Mindset: Experience developing and executing strategies that are both long-term and adaptable to changing business landscapes.
Ability to write production grade PEP8-compliant python code with a focus on readability, scalability and maintainability.
Collaboration & Communication: Strong interpersonal skills, with an emphasis on listening, empathy, and the ability to translate complex data concepts into understandable terms for non-technical stakeholders.

Skills / Experience Required:

Proven track record and experience with GenAI technologies
Hands-on experience with LLMs techniques (e.g., RAG, Agents, Graph RAG)

Open source LLMs (like Llama, Gemma, Mistral etc)

Closed source LLMs (such as Open AI GPT, Azure Open AI, Claude, Gemini etc)

Prompt Engineering / Tuning / RAG / RAFT

LLM finetuning such as PEFT (LoRA, QLoRA .)

Proven expertise in Python, especially in NLP and GenAI frameworks

Strong experience in Generative Models GANs, VAEs, Transformers

Knowledge of NLP algorithms that can handle various tasks such as intent recognition, entity extraction, language modelling, text classification, question answering, text summarization, topic modelling and so on.

Good to have foundational knowledge on Cloud, API frameworks and docker.

Good to have experience with databases like qdrant, Postgres etc

For more information do apply via Linked In or email b.lockett@huxley.com

Confidential Government Data Collection & Quality Management Analyst

About the job

Key Responsibilities

- Design and implement comprehensive data collection frameworks and methodologies for construction and facility management projects
- Develop data collection templates, forms, and digital tools to standardize information gathering across projects
- Establish and maintain data quality standards, validation rules, and quality control procedures
- Monitor data collection processes to ensure accuracy, completeness, and consistency of project information
- Conduct regular data quality audits and assessments to identify discrepancies, errors, and gaps
- Develop and maintain quality management dashboards and reporting systems for real-time monitoring
- Collaborate with project teams to define key performance indicators (KPIs) and data requirements
- Analyze collected data to identify trends, patterns, and quality issues across projects
- Prepare quality reports, metrics, and analytics for management review and decision-making
- Implement data governance policies and procedures to ensure compliance with organizational standards
- Train project staff on data collection protocols, quality standards, and data entry procedures
- Coordinate with IT teams to optimize data management systems and database structures
- Perform root cause analysis on quality non-conformances and develop corrective action plans
- Maintain documentation of data collection procedures, quality standards, and audit findings
- Support project closeout activities by ensuring complete and accurate data archiving

Required Qualifications

- Bachelor's degree in Data Science, Statistics, Information Management, Engineering, or related field
- 2 - 4 years of experience in data collection, data quality management, or quality assurance
- Proven experience in construction or facility management environments
- Strong proficiency in data analysis tools (Excel, Power BI, Tableau, or similar)
- Experience with database management systems (SQL, Access, or similar)
- Solid understanding of quality management principles and methodologies
- Knowledge of data validation techniques and quality control processes
- Experience developing data collection instruments and quality assessment frameworks

Familiarity with construction documentation and facility management data requirements

TestCrew | Quality Engineering & Software Testing

Data Scientist – Generative AI & NLP

About the job

We are looking for a Data Scientist with strong expertise in Generative AI, NLP, and deep learning to build intelligent, data driven solutions. The role focuses on developing LLM-powered applications, RAG-based systems, and advanced analytics models to solve complex business problems at scale.

Key Responsibilities

Design, develop, and deploy Generative AI and NLP solutions, including LLM fine-tuning and RAG-based architectures.

Analyze structured and unstructured data to extract insights and build predictive and generative models.

Build and maintain end-to-end ML pipelines, from data collection and feature engineering to model deployment and monitoring.

Apply advanced NLP techniques for text classification, summarization, question answering, entity recognition, and conversational AI.

Develop and manage embeddings and vector search pipelines for semantic retrieval and knowledge-based systems.

Evaluate model performance using appropriate metrics, perform error analysis, and iterate to improve accuracy and robustness.

Collaborate with product, engineering, and data teams to translate business requirements into data science solutions.

Communicate findings, model behavior, and insights clearly to both technical and non-technical stakeholders.

Stay current with emerging trends and research in Data Science, Generative AI, LLMs, and NLP.

Required Skills & Qualifications

Strong foundation in Data Science, Machine Learning, and Deep Learning.

Hands-on experience with Generative AI and LLM fine-tuning (e.g., prompt engineering, LoRA, PEFT).

Experience building RAG-based systems and working with unstructured text data.

Solid knowledge of NLP and transformer-based models (BERT, GPT, T5, LLaMA, etc.).

Proficiency in Python, along with ML/DL libraries such as PyTorch, TensorFlow, scikit-learn.

Experience with vector databases (FAISS, Pinecone, Weaviate, Milvus).

Strong skills in data analysis, model evaluation, and experimentation.

Familiarity with cloud platforms (AWS, Azure, or GCP).

Strong analytical thinking and communication skills.

Good to Have

Experience with MLOps (model versioning, monitoring, CI/CD).

Knowledge of distributed computing or large-scale data processing.

Experience handling large, unstructured, or semi-structured datasets.

Understanding of AI ethics, bias detection, and responsible AI practices.

Tangent International

 AI & Data Architect - LLM + Big Data (Digital Transformation)

About the job

We're building Asia's next-gen AI platform – Join us!

 Role: Lead AI & Data Architect

 Location: Riyadh, Saudi Arabia  Type: Full-time

 Salary: Competitive (FAANG Benchmark) + Equity

 Your Impact:

Design LLM training/inference pipelines on 1000+ GPU clusters.

Optimize Spark/Flink for PB-scale financial data processing.

Lead cross-border AI projects with ex-Google/NVIDIA teams.

 We Need You If You Have:

5+ years in AI systems (LLM/Transformer) + Big Data (Spark/MPP DBs).

Hands-on experience with GPU clusters & high-performance computing.

Fluent in Python/C++ and obsessed with scalability.

 Why Join?

Work with top 1% AI talent (50% PhDs from Tier-1 schools).

Build zero-to-one products in banking/healthcare AI.

Flexible R&D budget + publish at NeurIPS/ICML.

Requirements added by the job poster

- Authorized to work in Saudi Arabia

Al-Qadsiah Saudi Club نادي القادسية السعودي

Application Developer & Designer

About the job

Be Part of a Legacy Bigger Than the Game

At Al-Qadsiah Club we create more than teams! We're crafting a legacy that goes beyond the game, making an impact both on and off the field. Driven by ambition, synergy, and innovation, we aim to inspire generations. While shaping the future of Saudi sports.

This is more than just a job! It's an opportunity to be part of something larger than yourself. At Al-Qadsiah, you'll play a key role in shaping our legacy, contributing to the nation's sports vision, and making history every step of the way.

Overview:

The Applications Developer & Designer will be responsible for designing, developing, and maintaining custom software applications and digital solutions tailored to the needs of Al Qadsiah Club. This role combines strong development skills with creative design capabilities to deliver engaging, efficient, and scalable applications.

Key Responsibilities:

- Design, develop, test, and deploy custom applications (web & mobile) to support club operations and fan engagement.
- Develop and publish mobile applications (iOS & Android) using modern frameworks.
- Experience in API design, development, and integration with third-party or government systems.
- Hands-on experience with mobile development frameworks (React Native, Flutter, Swift, Kotlin).
- Design, develop, test, and deploy custom applications to support club operations and fan engagement.
- Collaborate with stakeholders to gather requirements and translate them into technical specifications.
- Develop user-friendly interfaces and seamless user experiences by applying best design practices.
- Maintain and enhance existing applications to improve performance, usability, and security.

- Integrate third-party APIs and services as needed for expanded functionality.
- Troubleshoot, debug, and resolve application issues promptly.
- Ensure applications comply with security standards and data privacy regulations.
- Work closely with the IT and digital teams to support digital transformation initiatives.
- Document development processes, code, and user manuals.
- Stay updated with emerging trends and technologies in application development and design.

Requirements

Qualifications:

- Bachelor's degree in Computer Science, Software Engineering, or a related field.
- Proven experience in application development and UI/UX design.
- Proficiency in programming languages such as JavaScript, Python, Java, C#, or others relevant to the club's tech stack.
- Experience with web frameworks (React, Angular, Vue.js) and backend technologies (Node.js, .NET, Django, etc.).
- Strong skills in database management (SQL, NoSQL).
- Familiarity with graphic design tools (Adobe XD, Figma, Sketch) for UI/UX design.
- Understanding of agile development methodologies.
- Excellent problem-solving and communication skills.
- Experience in sports or entertainment industry applications is a plus.

Benefits

Why Join Al-Qadsiah?

Be Part of the Legacy: Join a club that's redefining the future of Saudi sports, striving to lead the competition and set new standards of excellence.

Experience the Culture: Thrive in an environment that values quality, accountability, diversity, synergy, innovation, and ambition, while embracing harmony. This is the Qadsiah Way.

Müller's Solutions

Data Engineer

About the job

Müller's Solutions is seeking a talented Data Engineer with expertise in Talend to join our growing team. As a Data Engineer, you will play a critical role in building and maintaining data pipelines that enable seamless data integration and processing across various systems. You will work closely with data analysts and data scientists to ensure that data is accessible, reliable, and structured for analysis.

Responsibilities:

Design, develop, and maintain ETL processes using Talend to extract, transform, and load data from various sources

Collaborate with stakeholders to understand data integration requirements and ensure data is delivered accurately and on time

Implement data quality checks and validation procedures to maintain data integrity

Optimize data pipelines for performance and scalability, ensuring efficient data processing

Monitor data flow and resolve any issues related to data processing or quality

Document data architecture, ETL processes, and data lineage to enhance knowledge sharing within the team

Stay updated on best practices and advancements in data engineering, Talend, and related technologies

Requirements

Bachelor's degree in Computer Science, Information Technology, or a related field

Proven experience as a Data Engineer, with a strong focus on Talend

Expertise in ETL design and implementation using Talend data integration tools

Solid understanding of database management systems, SQL, and data warehousing concepts

Experience with data modeling and database design best practices

Strong analytical and problem-solving skills, with attention to detail

Familiarity with cloud data solutions (e.g., AWS, Azure) is a plus

Excellent communication skills for collaborating with cross-functional teams and stakeholders

A self-starter with the ability to work independently as well as part of a team

Knowledge of data governance and data security practices

Benefits

Why Join Us:

Opportunity to work with a talented and passionate team.

Competitive salary and benefits package.

Exciting projects and innovative work environment.

NXS Tech Ltd
AI Engineer

About the job

Our client who specialises in Voice AI platforms is looking for an AI Engineer to join their team in Riyadh.

What You'll Do

Maintain and evolve complex open-source AI frameworks (e.g., LiveKit Agents, Pipecat, Agno, LangChain), including handling custom modifications across fast-moving releases.
Design, write, and ship high-quality Python code that meets a high engineering bar.

What You Bring

Strong proficiency in Python and experience working in large, complex codebases.
Familiarity with open-source frameworks—either contributing to them or maintaining internal forks/customizations.
Arabic language ability (preferred).
Experience with AI/LLM frameworks (LiveKit Agents, Agno, LangChain, RAG pipelines, etc.).

Requirements added by the job poster

- 4+ years of work experience with Python (Programming Language)

Abyan Capital
Software Engineer
About the job
About the job

Job Overview

A Software Engineer is responsible for designing, developing, and testing computer programs and applications. They work to understand user needs or business requirements and translate them into effective, executable software solutions. The engineer collaborates with other teams such as design, development, and quality assurance to ensure the delivery of software products that meet required standards.

Key Responsibilities

Analyze system requirements and design software solutions that meet business needs.

Perform code reviews and provide constructive feedback to ensure code quality, security, and maintainability.

Develop and execute unit tests, integration tests, and other automated testing procedures to ensure software reliability.

Document technical specifications, development processes, and system configurations clearly for future maintenance and team collaboration.

Ensure software security and data protection best practices are followed throughout the development lifecycle.

Collaborate closely with other development teams to ensure system integration.

Improve user experience and overall application performance.

Stay updated on the latest software technologies and advancements to apply innovative solutions.

Troubleshoot, debug, and resolve software defects or performance bottlenecks.

Contribute to database schema design and optimize query performance (e.g., with MySQL, PostgreSQL).

Qualifications & Experience

Bachelor's degree in Computer Science, Software Engineering, or a related field.

2-1 Years of related work experience.

Lucidya | لوسيديا

AI Engineer (Saudi Only)

About the job

As an AI Engineer, you will lead the design, development, and production deployment of AI-driven solutions that solve complex business problems at scale. This role goes beyond model training—you will take ownership of AI system architecture, influence technical direction, and ensure models are production-ready, scalable, and aligned with business objectives. You will play a key role in advancing the organization's AI capabilities and mentoring other engineers while driving innovation across multiple AI domains.

Key Responsibilities

- Lead the design, development, and optimization of machine learning and deep learning models for real-world, production use cases.

- Own the end-to-end AI lifecycle, from problem definition and data exploration to model deployment, monitoring, and iteration.

- Architect and implement scalable, efficient data pipelines for training and inference on large and complex datasets.

- Evaluate model performance using robust metrics, conduct error analysis, and continuously improve model accuracy and reliability.

- Build and deploy neural networks using TensorFlow, PyTorch, or similar frameworks, ensuring production-grade quality.

- Collaborate closely with data engineers, software engineers, product managers, and domain experts to translate business needs into AI solutions.

- Drive technical decision-making around model selection, system architecture, and trade-offs (performance, cost, scalability).

- Ensure AI solutions follow ethical AI principles, data privacy standards, and regulatory requirements.

- Contribute to and review technical documentation, design proposals, and best practices for AI development.

- Mentor junior engineers and contribute to raising the overall technical bar of the AI team.

- Stay current with industry trends and research, and assess the adoption of new techniques or tools where they add real value.

- Support and improve model deployment, monitoring, and observability in production environments.

Requirements

Required Qualifications

- 2-3 years of hands-on experience in AI, machine learning, or related engineering roles.

- Strong proficiency in Python (Java or other languages is a plus).

Deep experience with machine learning and deep learning frameworks such as TensorFlow or PyTorch.

Proven experience working with large-scale datasets and building production-grade AI systems.

Solid understanding of model evaluation, optimization, and performance trade-offs.

Experience deploying AI models into production, with attention to scalability, reliability, and efficiency.

Strong problem-solving skills and the ability to translate complex business challenges into AI-driven solutions.

Excellent communication skills and experience working in cross-functional teams.

Nice to Have

Experience with MLOps, model monitoring, and CI/CD for AI systems.

Exposure to cloud platforms (AWS, GCP, Azure) for AI workloads.

Experience in domains such as NLP, computer vision, recommendation systems, or predictive analytics.

Prior experience mentoring or leading other engineers.

Master Works
LLM Engineers
About the job
Job Overview:

Master Works is looking for a highly skilled LLM Engineer to join our AI Core Delivery team within the AI & Analytics CoE. In this role, you will develop, deploy, and optimize advanced language model capabilities, including Retrieval-Augmented Generation (RAG) pipelines and agentic AI systems. You will play a key role in scaling AI Core as the central enterprise AI platform by ensuring production-ready performance, robust observability, and seamless integration of LLMs with internal and external systems.

Key Responsibilities

Model Development & Optimization

- Build and optimize RAG pipelines for efficient document processing, indexing, and retrieval
- Implement agentic AI logic for tool integration, task automation, and external data access
- Enhance query understanding, response ranking, and AI-generated output quality
- Develop evaluation benchmarks to measure LLM performance, accuracy, and relevance

LLMOps & Deployment

- Collaborate with API developers and backend engineers to deliver secure, observable LLM endpoints
- Deploy and manage LLMs in cloud-native or hybrid environments with support for scalability and multi-cloud readiness
- Implement CI/CD workflows for model updates, rollback mechanisms, and performance tuning

Backend & Data Integration

- Integrate LLM capabilities with enterprise data sources and knowledge bases
- Support multi-source retrieval and embedding strategies to improve AI responses
- Design pipelines that ensure low latency, high throughput, and fault tolerance

Security & Compliance

- Apply enterprise-grade authentication, access management, and encryption standards
- Ensure compliance with internal governance policies, data privacy, and audit requirements

Continuous Improvement

- Monitor system performance, debug issues, and fine-tune models based on real-world feedback
- Stay updated on advancements in LLM architectures, open-source tools, and evaluation frameworks

Requirements

- Bachelor's or Master's degree in Computer Science, AI, Data Science, or related field
- Hands-on experience with LLM development and deployment (OpenAI, Anthropic, Hugging Face, LLaMA, etc.)
- Strong understanding of Retrieval-Augmented Generation (RAG), embeddings, and vector databases

Experience with cloud environments (AWS, Azure, GCP) and infrastructure-as-code (IaC)
Proficiency with Python or similar languages for AI/ML pipeline development
Familiarity with container orchestration (Docker, Kubernetes) and CI/CD practices
Knowledge of observability tools for monitoring AI performance in production environments

Preferred Skills

Experience integrating agentic AI capabilities with external APIs and automation tools
Strong grasp of prompt engineering, contextual memory systems, and LLM evaluation
Exposure to enterprise AI security and compliance standards

TAWANTECH

Junior Software Developer (Banking Systems)

About the job

Job Summary:

We are looking for an enthusiastic Junior Software Developer to join our Banking Technology team. This position is ideal for a fresh graduate with a Bachelor's degree in Computer Science who is eager to begin a career in software development within the banking and financial services sector. The Developer will support the design, development, testing, and maintenance of secure and high-performance banking applications.

Key Responsibilities:

- Assist in developing, testing, and maintaining banking and financial applications under the guidance of senior developers.

- Write clean, efficient, and well-documented code following coding standards and best practices.

- Participate in the full software development life cycle (SDLC), including requirement analysis, development, testing, and deployment.

- Support the development of applications such as core banking systems, digital channels (online/mobile banking), and internal tools.

- Fix bugs and support enhancements in existing systems.

- Work closely with QA testers, business analysts, and other team members to deliver reliable solutions.

- Ensure application security, data integrity, and compliance with banking and regulatory standards.

- Participate in code reviews and apply feedback to improve code quality.

- Learn and apply new technologies, frameworks, and banking domain knowledge

Requirements

- Bachelor's degree in Computer Science, Software Engineering, or a related field.

- Fresh graduate or up to 1 year of experience in software development or internships.

- Good understanding of programming fundamentals (data structures, algorithms, OOP concepts).

- Knowledge of at least one programming language such as Java, C#, Python, or JavaScript.

- Basic understanding of databases and SQL.

- Familiarity with software development concepts and version control systems (e.g., Git)

Confidential Government
Business Analyst (AI & Data Projects)

About the job
About the Role:

We are looking for a passionate and analytical Business Analyst to join our team at the National Center for Artificial Intelligence. In this role, you will act as a bridge between business stakeholders and technical teams, translating business needs into clear requirements for cutting-edge AI solutions. This is an exciting opportunity for a fresh graduate to launch a career in the field of Artificial Intelligence, Generative Models, and Smart Infrastructure.

Key Responsibilities:

Requirements Gathering: Collaborate with various departments to gather, analyze, and document business requirements for AI and smart solution projects.

Strategic Alignment: Translate strategic organizational goals into clear functional and technical requirements for the development teams.

Project Support: Support the planning and execution of technical projects, including Generative AI models, automation, and smart infrastructure.

Collaboration: Work closely with Data Science, Engineering, and Infrastructure teams to understand technical capabilities and ensure alignment with business needs.

Documentation: Create detailed use cases, workflow models, and process maps to guide project development.

Reporting & Analysis: Prepare analytical reports and presentations to support executive decision-making.

Performance Monitoring: Monitor the performance of AI initiatives, analyze results, and provide recommendations for continuous improvement.

Market Research: Stay updated on the latest trends and applications in Artificial Intelligence and provide insights to the team.

Qualifications & Requirements:

Education: Bachelor's degree in Computer Science, Engineering, Information Systems, Data Science, or a related field.

Experience: Fresh Graduate (0-1 years of experience).

Skills:

Strong analytical and problem-solving skills.

Ability to document complex technical requirements clearly.

Excellent verbal and written communication skills.

Strong interest in Artificial Intelligence and Data Science.

Proficiency in Microsoft Office (Excel, PowerPoint, Word).

Master Works
Data Scientist
About the job
Data Scientist

Analyze structured and unstructured data to discover patterns and trends.

Design and implement statistical models and machine learning algorithms using Python and R.

Develop and maintain data pipelines and ensure data quality and integrity.

Create insightful visualizations and reports for business stakeholders.

Collaborate with data engineers, analysts, and domain experts to define requirements and deliver solutions.

Communicate complex data findings in a clear and actionable manner.

Conduct A/B testing, hypothesis testing, and other experimental designs as needed.

Stay up to date with emerging data science tools and best practices.

Müller's Solutions

Data Scientist

About the job

Müller's Solutions is looking for an experienced Data Scientist to join our dynamic team. In this position, you will leverage your analytical and programming skills to transform data into actionable insights that drive business decisions. You will collaborate closely with various departments to develop predictive models, enhance data-driven strategies, and optimize processes using cutting-edge data science techniques.

Responsibilities:

Analyze vast amounts of structured and unstructured data to derive insights and generate actionable recommendations

Develop, implement, and maintain machine learning models to address specific business needs

Work alongside stakeholders to define project objectives and translate business requirements into technical tasks

Conduct experiments and validate analytical models using appropriate methodologies

Create data visualizations and dashboards to effectively communicate technical findings and results to non-technical stakeholders

Stay abreast of industry trends and emerging technologies in data science and analytics

Ensure data integrity and adherence to data governance principles

Mentor junior data analysts and provide guidance on data science best practices

Requirements

Bachelor's or Master's degree in Data Science, Computer Science, Mathematics, Statistics, or a related field

Proven experience as a Data Scientist or in a similar data-focused role

Proficient in programming languages such as Python or R, with demonstrated experience in data manipulation and analysis

Experience with machine learning frameworks and libraries (e.g., scikit-learn, TensorFlow, PyTorch)

Strong skills in data visualization tools (e.g., Tableau, Power BI) for developing clear and actionable insights

Strong understanding of statistical methods, modeling techniques, and their practical applications

Proficient in SQL for data extraction and manipulation

Excellent analytical thinking and problem-solving abilities

Strong communication skills, with the ability to convey complex technical concepts in an understandable manner

Ability to work both independently and collaboratively within a team

Benefits

Why Join Us:

Opportunity to work with a talented and passionate team.

Competitive salary and benefits package.

Exciting projects and innovative work environment.

Klanik
AI Engineer

About the job
We're Hiring: Senior AI Engineer

 Location: Saudi Arabia- Dammam

 Languages: Arabic + English (must)

We are looking for a Senior AI Engineer to design, build, and deploy advanced AI solutions. This role blends hands-on engineering, modern AI development, and strong customer collaboration.

Key Responsibilities

Work closely with customer teams to understand goals and shape high-value AI use cases.
Design and deploy end-to-end AI solutions including agentic AI, Generative AI, and predictive ML.
Build AI agents using frameworks like LangGraph, CrewAI, or LlamaIndex.
Act as a technical expert, guiding clients on AI best practices, MLOps, governance, and scaling.
Communicate complex technical outcomes clearly to both technical and non-technical stakeholders.

AI & Machine Learning Expertise

Strong Python skills using libraries such as pandas, NumPy, scikit-learn, etc.
Practical experience with LLMs, Generative AI workflows, and vector databases.
Solid understanding of agentic AI development and lifecycle management.
Experience designing predictive models for real business use cases.
Ability to build scalable, high-performance AI pipelines.

Application Development & Operations

Experience building REST APIs using frameworks like FastAPI or Flask.
Strong skills in containerization with Docker and deployment on Kubernetes.

Understanding of secure coding practices, authentication, and secrets management.
Ability to deploy ML and GenAI solutions into production environments.
Comfortable leading technical discussions with customers in a consulting setup.

Customer & Problem-Solving Skills

Experience in client-facing roles with excellent communication skills.
Ability to present technical concepts to executives, business teams, and engineers.
Strong problem-solving mindset with the ability to manage complex challenges.
Passion for exploring new technologies and improving AI solution quality.
Ability to work across diverse industries and business needs.

Minimum Qualifications

6–8 years of hands-on experience in AI engineering, ML engineering, or software development.
Master's degree or PhD in Computer Science, AI, Statistics, Engineering, or similar.
Experience with AWS, Azure, or GCP cloud environments.
Familiarity with MLOps concepts like CI/CD, monitoring, and model governance.
Experience deploying AI or ML applications into production environments.

Years of Experience

6–8 years of hands-on experience in AI engineering, ML engineering, or software development.

Languages:

- English
- . Excellent communication, verbal and written skills.

You are looking for a great opportunity to be part of an amazing challenge, with great development possibilities ? This job is for you !!!

About KLANIK:

Klanik is an IT consulting company providing solutions to some of the world's largest industrial and services groups for 14 years. We support our clients with the creation and development of their new products and services around 4 main business lines:

- Information Technology and Systems (IT & IS)
- DevOps and Cloud
- Big Data and AI
- Cybersecurity

Klanik is a community of +500 passionate experts empowering clients in 6 countries throughout Europe, Middle East and the Americas.

Our Team is dedicated to offer our global clients project support while guaranteeing a consistent level of service alongside a commitment to excellence and strong core values.

We're always looking for smart, talented, driven, down-to-earth, fun-to-work-with people who want to make a positive and meaningful impact!

Being a "KLANIK"

That means being an out of the box thinker, a precursor who is keen to create, innovate and collaborate in an environment where you can enjoy being yourself and valued for your ideas. It's being part of a community of experts that have a passion for and stay abreast of the latest technologies.

You feel like a technology pioneer, full of creative ideas, supported by a strong know how and expertise in the latest technologies? We believe you could be a good fit to our culture!

Our culture is our pride

At Klanik, we believe that we are stronger together than we are alone. Trust, ethics, respect and transparency are deeply fixed in our culture, alongside with the pride in a job well done.

Our community motto is that people give the best of them when they feel listened, respected and empowered to develop themselves. Therefore the better we treat our people, the bigger the success they will achieve. We apply those values on day to day basis among our teams, with our clients and even with our competitors.

Being part of the Klanik community means relying on each other's, learning from each other's and growing all together. Our community fosters creativity, innovation and development within our teams to tackle more and more complex challenges and deliver the best solutions to our clients.

UMATR

Applied AI/ML Engineer - Gaming (Saudi National's)

About the job

Title: Applied AI / Machine Learning Engineer – Gaming (Arabic Speaking)

Tech Stack: Python, scikit-learn, TensorFlow or PyTorch, Pandas, NumPy, SQL/NoSQL databases (PostgreSQL, BigQuery, MongoDB), ETL pipelines (Airflow, Prefect), cloud storage (S3, GCS), Docker, Kubernetes, FastAPI/Flask, MLflow/Kubeflow/Vertex AI, AWS/GCP/Azure, Git

What You'll Do:

You'll design, develop, and deploy machine learning models that enhance the player experience for a popular game, including churn prediction, personalization, user engagement optimization, and fraud detection. You'll build and maintain data pipelines to collect, clean, and process large datasets from multiple sources, collaborate with product and engineering teams to integrate AI models into production systems, and implement MLOps practices such as model versioning, monitoring, CI/CD, and retraining pipelines. Additionally, you'll conduct exploratory data analysis to guide model features, optimize models for accuracy and scalability, develop dashboards to communicate insights, and proactively propose innovative AI/ML solutions.

Who They Are:

A fast-growing gaming company focused on delivering a high-quality, engaging experience for players. They combine data-driven insights with cutting-edge AI to create smarter, more personalized gameplay. You'll be part of a team that values innovation, collaboration, and the real-world impact of AI on user engagement.

What Is In It For You:

Benefits:

Work on impactful, real-world AI/ML projects in the gaming industry
Opportunity to own end-to-end ML projects from concept to deployment
Exposure to MLOps, cloud platforms, and scalable AI systems

Professional growth and learning in advanced AI/ML techniques
30k SAR + other benefits

Requirements:

Bachelor's or Master's degree in Computer Science, Data Science, AI, or a related field
3–7 years of hands-on experience in machine learning, data science, or AI engineering
Proven experience delivering end-to-end ML projects from concept to deployment
Strong programming in Python (pandas, NumPy, scikit-learn, TensorFlow or PyTorch)
Solid understanding of ML algorithms (supervised, unsupervised, deep learning)
Hands-on experience with data engineering tools: ETL pipelines (Airflow, Prefect, or custom),
SQL/NoSQL databases, cloud storage (S3, GCS)
Experience with MLOps and production deployment: Docker, Kubernetes, APIs (FastAPI/Flask),
CI/CD for ML (MLflow, Kubeflow, Vertex AI)
Familiarity with cloud platforms (AWS, GCP, Azure ML)
Proficiency in Git and collaborative workflows

Lucidya | لوسيديا

AI Engineer

About the job

The purpose of an AI engineer position is to design, develop, and implement artificial intelligence solutions to address complex problems and enhance processes within an organization. This role aims to leverage advanced algorithms, machine learning, and deep learning techniques to create intelligent systems that can analyze data, make predictions, and automate tasks. Ultimately, the AI engineer contributes to technological innovation, improves efficiency, and helps the organization stay competitive by harnessing the power of artificial intelligence in various applications, such as data analysis, image recognition, natural language processing, and more.

Requirements

Design and optimize machine learning algorithms for specific applications.

Manage and preprocess large datasets to extract relevant features for training AI models

Train machine learning models and evaluate their performance through testing

Use programming languages (e.g., Python, Java) for AI development

Apply expertise in deep learning frameworks like TensorFlow or PyTorch to build and implement neural networks

Work closely with cross-functional teams, including data scientists, software engineers, and domain experts

Analyze complex problems and propose innovative AI solutions to address business challenges

Stay updated on the latest advancements in AI and integrate new technologies into existing systems

Ensure AI applications comply with ethical standards and legal regulations

Prepare comprehensive documentation for algorithms, models, and processes

Engage in ongoing learning to stay abreast of emerging technologies and industry trends

Assist in deploying AI models into production environments, ensuring scalability and efficiency.

Multimedia

AI Expert / AI Solutions Engineer

About the job

We are looking for an innovative AI Expert / AI Solutions Engineer to join our Company. In this role, you will be responsible for designing, developing, and implementing AI-driven solutions that enhance our service offerings and improve operational efficiency. You will collaborate closely with various teams to create intelligent systems that leverage machine learning, data analysis, and natural language processing to meet the needs of our clients.

Key Responsibilities:

Design and develop AI solutions that integrate seamlessly with existing systems and platforms
Conduct research to identify the latest AI technologies and methodologies applicable to our projects

Collaborate with cross-functional teams to understand business requirements and objectives and translate them into AI-driven solutions

Implement machine learning models, algorithms, and systems capable of learning from data and improving performance over time

Develop and conduct tests to validate the effectiveness and accuracy of AI applications

Provide technical support and guidance to team members and clients on AI solutions

Monitor the performance of AI systems and make adjustments as needed to optimize output

Stay current on trends in AI technology and best practices, ensuring the company remains at the forefront of the industry

Requirements

Qualifications:

Bachelor's or Master's degree in Computer Science, Artificial Intelligence, Data Science, or a related field

Proven experience as an AI Engineer or in a similar role, with a demonstrable portfolio of completed projects

Strong knowledge of machine learning frameworks (e.g., TensorFlow, PyTorch , Google vertex , n8n) and programming languages (e.g., Python, Java)

Experience with data processing and analysis tools (e.g., Pandas, NumPy, R)

Familiarity with natural language processing (NLP) techniques and tools

Ability to work with large datasets and understand data handling and data integration techniques

Excellent problem-solving skills and the ability to work collaboratively within a team environment

Strong communication skills to effectively convey complex ideas to technical and non-technical stakeholders

Tamara
Backend Engineer

About the job
About Us

Tamara is the leading fintech platform in Saudi Arabia and the wider GCC region with a mission to help people make their dreams come true by building the most customer-centric financial super-app on earth. The company serves millions of users in the region and partners with leading global and regional brands such as SHEIN, Jarir, noon, IKEA and Amazon, as well as small and medium businesses.

Tamara is Saudi Arabia's first fintech unicorn and is backed by Sanabil Investments, a wholly owned company by the Public Investment Fund (PIF), SNB Capital, Checkout.com, amongst others. The company operates from its headquarters in Riyadh, with additional regional and global support offices.

Your role

We're seeking Backend Engineers for our team (all levels). As a Backend Engineer, you will be crucial in leading the way to build cutting-edge platforms that enable seamless and scalable transactions.

Drawing on your proficiency in payment, shopping, and banking systems you will be responsible for designing, developing, and optimizing our secure and robust software infrastructure to create unique experiences only Tamara can provide.

With a proven track record of managing cross-functional teams you will collaborate with a diverse ecosystem of talented engineers, designers, analysts, product experts, and other team members to leverage system design, create technical solutions, dive deep into complex problems and ultimately revolutionize the way millions of users shop, pay, and bank.

You are a driven, determined, curious team player, knowing that collective strength means we all win. With a positive outlook, you are solution-oriented—persevering regardless of circumstances, always finding a way through, no matter the challenges.

You will effectively find a way to work with everyone through empathy and respect. You will be driven and comfortable with responding quickly with urgency, with the ability to change course without losing momentum and energy, resulting in great success.

Your responsibilities

Design, build and maintain APIs, services, and systems across Tamara's engineering teams.
Debug production issues across services and multiple levels of the stack
Work with engineers across the company to build delightful features that span various parts of the system
Collaborate with our business, product, and operations teams to understand and solve our users' pain points.

Your expertise

You have strong software development experience building scalable products and services
Good understanding of SOLID principles, Design Patterns
Knowledge of AWS, OCI, Kubernetes/Docker
Experience with distributed systems with messaging tools like Kafka or RabbitMQ
Experience with Agile/Scrum
Knowledge of Javascript, Vue.js, HTML and CSS - is a plus
You are proactive, goal-orientated, and self-structured in your approach
You have experience as a developer in a startup company - is a plus
Team player, creative thinker, and passionate about exploring new technologies
Good written and spoken communication skills in English

HungerStation | هنقرستيشن

Software Engineer II - Backend (Saudi Nationals Only)

About the job

HungerStation is part of the Delivery Hero Group, the world's pioneering local delivery platform, our mission is to deliver an amazing experience—fast, easy, and to your door. We operate in over 70+ countries worldwide. Headquartered in Berlin, Germany. Delivery Hero has been listed on the Frankfurt Stock Exchange since 2017 and is part of the MDAX stock market index.

Job Description

We are looking for a highly talented Software Engineer II - Backend to join our growing team in Riyadh. If you are looking for a place where you can gain hands-on experience and create a direct impact, then this may be the place for you! The ideal candidate will collaborate with the Product Team in order to understand product requirements and provide technical expertise for all products as required, and to assist in analyzing, designing, testing, and structuring the required solutions to deliver a high-quality working software based on the business needs and standards.

You Will Be Working On

Software Development

Keep abreast of latest software development methodologies in order to be able to provide best-in-class software solutions

Analyze product requirements in order to understand engineering requirements, estimate efforts and provide the required solutions in collaboration with Product Team

Assist in building development components in order to transform the requirements into actual working software accurately

Document all coding steps in order to ensure comprehensibility and to facilitate future modifications and maintenance

Investigate and resolve issues and bugs

Collaborate with other colleagues in order to assist each other in code reviews and deliver code review reports accordingly

Perform functional and module testing in order to ensure functionality of delivered solutions

Assist in user trials and acceptance testing

Governance and Resilience

Follow all relevant policies, procedures, and processes in order for the daily work to be carried out in a controlled and consistent manner

Contribute to the identification of opportunities for continuous improvement of processes, practices, work processes, cost effectiveness, and productivity enhancement

Promote to other employees within the organization the implementation and adherence to policies, procedures, processes, and instructions

Daily Operations

Follow daily operations relating to the job to ensure work continuity

Contribute to preparing timely and accurate reports that concern the line of work to meet the requirements, objectives, and standards

Ensure the satisfaction of both internal and external customers by addressing their needs in a courteous and timely manner

Qualifications

2- 4 years of experience in backend development using GoLang, Ruby on Rails (RoR), Java, or Python

Bachelor Degree in a relevant field is required

Master's degree in a relevant field is preferred

Knowledge & understanding of software architecture, including Domain-Driven Design (DDD), microservices, Kubernetes, and containerization

Additional Information

We offer relocation support globally to our permanent employees.

Exchange ideas and meet 2000+ colleagues from different teams within Delivery Hero in our active guilds and through our global tech and product community.

Develop your skills with your personal educational budget for conferences and external training.

Access our e-learning platform LinkedIn and participate in our various in-house training programs

And much more...

Systems Arabia
Software Engineer

About the job

We are looking for two skilled Full Stack Developers with expertise in React.js and .NET. Each candidate should be proficient in these technologies and have working knowledge of the other. The ideal resource will also be able to leverage AI-powered development tools such as GitHub Copilot and MCP servers for accelerating new feature development.

Key Responsibilities:

- Develop and maintain scalable web applications using React.js and .NET.
- Collaborate with cross-functional teams to design and implement robust solutions.
- Utilize AI tools (e.g., GitHub Copilot, MCP servers) to enhance productivity and code quality.
- Ensure application performance, security, and responsiveness.
- Participate in code reviews and provide constructive feedback.

Required Skills & Qualifications:

- Proficiency in React.js and .NET (primary skill) with working knowledge of the other.
- Strong understanding of front-end and back-end development principles.
- Familiarity with RESTful APIs and database integration.
- Ability to adapt to AI-driven development workflows.
- Excellent problem-solving and communication skills.

Confidential

Data Scientist

About the job

The Data Scientist will lead the design, development, and implementation of advanced analytics and business intelligence solutions. This role is pivotal in driving the Group's data strategy, building scalable data warehouse models, and delivering actionable insights using Microsoft BI tools or similar BI tools. The Data Scientist will ensure all data practices align with business objectives, governance standards, and the strategic goals.

Responsibilities

Deliver end-to-end BI and data warehouse solutions using Power BI, SQL Server, Azure Data Factory, and Synapse.

Design and maintain scalable data warehouse and data lake architectures.

Collaborate with stakeholders to define KPIs and deliver impactful dashboards.

Conduct advanced data analysis and predictive modeling.

Ensure data quality, governance, security, and compliance.

Integrate ERP and business systems (SAP, Oracle Fusion,...).

Support Agile project delivery and documentation.

Champion Data Ops/DevOps best practices.

Qualifications

Bachelor's degree in Computer Science, Engineering, or related field.

Minimum 6 years of experience in data science, analytics, or BI functions.

Proven experience leading BI/data warehouse projects using Microsoft tools.

Expertise in SQL, DAX, Power Query, and data modeling.

Experience with Azure-based data tools.

Proficiency in Arabic and English.

HungerStation | هنقرستیشن

Data Engineer

About the job

Key Responsibilities:

Collect and process data from various sources.

Analyze trends and patterns to inform marketing and operational strategies.

Create reports and visualizations to present findings to stakeholders.

Collaborate with cross-functional teams to identify data needs and solutions.

Ensure data accuracy and integrity throughout the analysis process.

Required Skills:

Proficiency in data analysis tools (e.g., SQL, Excel, Python, or R).

Strong analytical and problem-solving skills.

Experience with data visualization software (e.g., Tableau, Power BI).

Ability to communicate complex data insights clearly to non-technical audiences.

Knowledge of statistical methods and data modeling techniques.

Qualifications:

Bachelor's degree in a relevant field (e.g., Data Science, Statistics, Business).

Previous experience in data analysis or a related role is often preferred.

Requirements added by the job poster

- 3+ years of work experience with SQL
- 3+ years of work experience with Tableau

Tata Consultancy Services
Data Scientist – Machine Learning

About the job
Job Title – Data Scientist – Machine Learning

Company – TCS (MEA)

Location – Dhahran, Eastern, Saudi Arabia

Job type – Full time

About Us :

Tata Consultancy Services (TCS) is an IT services, consulting and business solutions organization that has been partnering with many of the world's largest businesses in their transformation journeys for over 50 years. TCS offers a consulting-led, cognitive powered, integrated portfolio of business, technology and engineering services and solutions. This is delivered through its unique Location Independent Agile™ delivery model, recognized as a benchmark of excellence in software development.

A part of the Tata group, India's largest multinational business group, TCS has over 616,171 of the world's best-trained consultants with 157 nationalities in 53 countries. For more information, visit www.tcs.com and follow TCS news at [@TCS_News](https://twitter.com/TCS_News).

Job Description:

Key Responsibilities:

Develop and deploy machine learning and deep learning models for time series forecasting, NLP, and sensor/IoT data analysis.

Fine-tune and deploy state-of-the-art (SOTA) models, including LLMs, using frameworks like HuggingFace, and methods like LoRA, Q-LoRA, and full model fine-tuning.

Implement and evaluate bagging and boosting models (e.g., XGBoost, LightGBM, CatBoost) for structured and sensor data.

Design and optimize neural network architectures, including CNNs, RNNs, Transformers, and attention-based models using PyTorch.

Build and evaluate model performance using appropriate metrics and validation strategies.

Work with smart sensor data and IoT systems, extracting features and building predictive models for anomaly detection, failure prediction, and optimization.
Develop and expose model inference as REST APIs using FastAPI or similar web frameworks.
Collaborate with DevOps and engineering teams to operationalize models using Docker, CI/CD pipelines, and cloud platforms.
Maintain and improve data pipelines, feature engineering, and model monitoring in production environments.

Preferred Qualifications:

Experience with edge computing, GPU acceleration, or model optimization for real-time inference.
Exposure to MLOps tools or platforms such as MLflow, Kubeflow, or Seldon.
Background in industrial IoT, predictive maintenance, or smart systems is a plus.
Familiarity with time-series databases or historians (e.g., InfluxDB, DAHS) is a plus.

Thank you for expressing interest in this role at TCS. We will review your application and reach out to you if your profile aligns with our requirements for this opportunity.

Application Deadline : 31 -Dec-2025

Job Description:

Technical Skills:

Strong foundation in deep-learning mathematics (linear algebra, probability, optimization)
Expert in PyTorch and/or TensorFlow.
Mastery of Hugging Face Transformers/Diffusers and ability to write custom CUDA kernels
Experience with distributed training on GPU/TPU clusters.
Proficiency with prompt-engineering tools (LangChain, LlamaIndex).
RAG expertise: building vector stores, hybrid retrieval, and multi-agent orchestration.
MCP server knowledge: designing, deploying, and scaling services that manage agent communication and state (REST/gRPC, message queues, load balancing).
MLOps stack: Docker, Kubernetes, Helm, CI/CD, Triton/TensorRT-Inference Server, Prometheus, Grafana.

Large-scale data pipelines (Spark, Beam, Dask) and data versioning (LakeFS, DVC, Weights & Biases).

Publications or patents in generative AI (NeurIPS, ICML, ICLR, CVPR).

Open-source contributions to major libraries (Hugging Face, PyTorch, Diffusers).

Domain expertise in finance, healthcare, gaming, or creative media.

Thank you for your interest in applying for this position with TCS. We will review your application and will get back to you if we are considering your interest in this opportunity.

Application Deadline: 31 - December - 2025

Diyar United Company
Software Developer- KSA

About the job

Scope of Work:

Develop software components of the system and ensure integration with back-end systems

Develop software modifications and enhancements to fix bugs and defects

Develop and maintain system databases

Provide support for the system and its services

Ensure integration and support for back-end systems

Qualification:

Bachelor's degree in Computer Science, Information Systems, or Software Engineering

Experience: Minimum of 4 years of experience in software development and maintenance, as well as database development and maintenance

Expected basic working hours per day: 8 hours

Expected overtime working hours per day: 2 hours

aramco digital
Corporate Strategy Analyst
About the job
Overview:

The Corporate Strategy Analyst Supports the company's long-term vision, strategic planning, and business transformation initiatives by conducting research, analyzing data, and preparing performance reports. The role provides analytical support to senior team members and cross functional teams in developing insights that enhance growth, competitiveness, and overall performance.

Key Responsibilities:

Support the development, review, and tracking of Aramco Digital's strategy and business plans. Conduct industry, market, and competitor research to help identify emerging trends, risks, and opportunities.

Assist in evaluating new business opportunities, investments, and partnerships through data collection and basic financial analysis.

Monitor and track company performance against strategic objectives, KPIs, and financial targets.

Prepare dashboards, reports, and presentations for management review.

Provide initial recommendations and insights to help optimize performance and resource allocation.

Assist in benchmarking against industry peers and global best practices.

Summarize economic, regulatory, and technological developments relevant to the business.

Translate data and findings into clear and concise reports for senior leadership.

Coordinate with business units to support alignment of divisional strategies with corporate priorities.

Provide support for transformation programs, M&A activities, and other strategic initiatives.

Assist in organizing and preparing materials for strategic workshops, reviews, and alignment sessions.

Contribute to drafting narratives for business plans, strategy documents, and investment cases.

Support the management of relationships with affiliates and subsidiaries.

Coordinate administrative tasks to ensure smooth affiliate engagement and compliance.

Assist in consolidating reporting requirements and governance processes.

Conduct research and prepare analysis to support management decision-making.

Track and monitor financial activities, including cash calls, under supervision.

Qualifications:

Education:

Bachelor's degree in business, Economics, Finance, or related field.

Experience:

0+ years of experience in corporate strategy, management consulting, investment banking, or a similar analytical role

Skills & Competencies:

Strong analytical and research skills.

Ability to prepare clear reports and presentations.

Proficiency in Excel, PowerPoint, and data visualization tools (e.g., Power BI)

attention to detail and ability to manage multiple tasks.

- Commute to this job's location

MIDWAM

AI & Computer Vision Developer (Creative AI Integration)

About the job

We're Hiring | AI & Computer Vision Developer (Creative AI Integration) — Jeddah (On-site)

Midwam is looking for an innovative AI & Computer Vision Developer to design and implement AI-powered interactive systems for immersive experiences across museums, cultural centers, exhibitions, events, and brand activations.

What you'll do:

Build real-time computer vision pipelines (Python, OpenCV, MediaPipe, YOLO, MoveNet)
Develop gesture/pose/face-hand tracking and touchless interactions
Integrate sensors (Kinect, RealSense, LiDAR, industrial cameras) and multi-sensor fusion
Embed AI/CV modules into Unity / Unreal / TouchDesigner
Create generative AI workflows (SDXL, ControlNet, LoRA, ComfyUI) for photo moments, stylization, environments, and story content
Prototype demos and support deployments for live installations

Required skills:

Python (mandatory)
OpenCV / MediaPipe + basic ML (PyTorch/TensorFlow)
Unity (C#) and/or Unreal (Blueprints/C++)
OSC / WebSocket / REST APIs
Experience with diffusion models + ComfyUI workflows
Strong communication, rapid prototyping, solid documentation
Nice to have:

Experience in exhibitions / museums / interactive installations
GPU optimization (CUDA), shaders (GLSL/HLSL), creative coding / computational art

📍 Location: Jeddah, Saudi Arabia (On-site)

✉️ To apply: Send your CV/portfolio (and GitHub/showreel if available) to info@midwam.com

with subject: AI & CV Developer – Jeddah

Klanik
AI Engineer

About the job
We're Hiring: Senior AI Engineer

 Location: Saudi Arabia- Dammam

 Languages: Arabic + English (must)

We are looking for a Senior AI Engineer to design, build, and deploy advanced AI solutions. This role blends hands-on engineering, modern AI development, and strong customer collaboration.

Key Responsibilities

Work closely with customer teams to understand goals and shape high-value AI use cases.
Design and deploy end-to-end AI solutions including agentic AI, Generative AI, and predictive ML.
Build AI agents using frameworks like LangGraph, CrewAI, or LlamaIndex.
Act as a technical expert, guiding clients on AI best practices, MLOps, governance, and scaling.
Communicate complex technical outcomes clearly to both technical and non-technical stakeholders.

AI & Machine Learning Expertise

Strong Python skills using libraries such as pandas, NumPy, scikit-learn, etc.
Practical experience with LLMs, Generative AI workflows, and vector databases.
Solid understanding of agentic AI development and lifecycle management.
Experience designing predictive models for real business use cases.
Ability to build scalable, high-performance AI pipelines.

Application Development & Operations

Experience building REST APIs using frameworks like FastAPI or Flask.
Strong skills in containerization with Docker and deployment on Kubernetes.

Understanding of secure coding practices, authentication, and secrets management.
Ability to deploy ML and GenAI solutions into production environments.
Comfortable leading technical discussions with customers in a consulting setup.

Customer & Problem-Solving Skills

Experience in client-facing roles with excellent communication skills.
Ability to present technical concepts to executives, business teams, and engineers.
Strong problem-solving mindset with the ability to manage complex challenges.
Passion for exploring new technologies and improving AI solution quality.
Ability to work across diverse industries and business needs.

Minimum Qualifications

6–8 years of hands-on experience in AI engineering, ML engineering, or software development.
Master's degree or PhD in Computer Science, AI, Statistics, Engineering, or similar.
Experience with AWS, Azure, or GCP cloud environments.
Familiarity with MLOps concepts like CI/CD, monitoring, and model governance.
Experience deploying AI or ML applications into production environments.

Years of Experience

6–8 years of hands-on experience in AI engineering, ML engineering, or software development.

Languages:

- English
- . Excellent communication, verbal and written skills.

You are looking for a great opportunity to be part of an amazing challenge, with great development possibilities ? This job is for you !!!

About KLANIK:

Klanik is an IT consulting company providing solutions to some of the world's largest industrial and services groups for 14 years. We support our clients with the creation and development of their new products and services around 4 main business lines:

- Information Technology and Systems (IT & IS)
- DevOps and Cloud
- Big Data and AI
- Cybersecurity

Klanik is a community of +500 passionate experts empowering clients in 6 countries throughout Europe, Middle East and the Americas.

Our Team is dedicated to offer our global clients project support while guaranteeing a consistent level of service alongside a commitment to excellence and strong core values.

We're always looking for smart, talented, driven, down-to-earth, fun-to-work-with people who want to make a positive and meaningful impact!

Being a "KLANIK"

That means being an out of the box thinker, a precursor who is keen to create, innovate and collaborate in an environment where you can enjoy being yourself and valued for your ideas. It's being part of a community of experts that have a passion for and stay abreast of the latest technologies.

You feel like a technology pioneer, full of creative ideas, supported by a strong know how and expertise in the latest technologies? We believe you could be a good fit to our culture!

Our culture is our pride

At Klanik, we believe that we are stronger together than we are alone. Trust, ethics, respect and transparency are deeply fixed in our culture, alongside with the pride in a job well done.

Our community motto is that people give the best of them when they feel listened, respected and empowered to develop themselves. Therefore the better we treat our people, the bigger the success they will achieve. We apply those values on day to day basis among our teams, with our clients and even with our competitors.

Being part of the Klanik community means relying on each other's, learning from each other's and growing all together. Our community fosters creativity, innovation and development within our teams to tackle more and more complex challenges and deliver the best solutions to our clients.

Lucidya | لوسيديا

AI Engineer (Saudi Only)

About the job

The purpose of an AI engineer position is to design, develop, and implement artificial intelligence solutions to address complex problems and enhance processes within an organization. This role aims to leverage advanced algorithms, machine learning, and deep learning techniques to create intelligent systems that can analyze data, make predictions, and automate tasks. Ultimately, the AI engineer contributes to technological innovation, improves efficiency, and helps the organization stay competitive by harnessing the power of artificial intelligence in various applications, such as data analysis, image recognition, natural language processing, and more.

Requirements

Design and optimize machine learning algorithms for specific applications.

Manage and preprocess large datasets to extract relevant features for training AI models

Train machine learning models and evaluate their performance through testing

Use programming languages (e.g., Python, Java) for AI development

Apply expertise in deep learning frameworks like TensorFlow or PyTorch to build and implement neural networks

Work closely with cross-functional teams, including data scientists, software engineers, and domain experts

Analyze complex problems and propose innovative AI solutions to address business challenges

Stay updated on the latest advancements in AI and integrate new technologies into existing systems

Ensure AI applications comply with ethical standards and legal regulations

Prepare comprehensive documentation for algorithms, models, and processes

Engage in ongoing learning to stay abreast of emerging technologies and industry trends

Assist in deploying AI models into production environments, ensuring scalability and efficiency.

Data Scientist
About the job
Job Purpose:

The Data Scientist will be responsible for transforming raw and legacy data into structured, accurate, and dashboard-ready datasets. The role focuses on migrating old data into new systems, cleaning and standardizing datasets, and enabling high-quality analytics and reporting.

Key Responsibilities:

- Transform and restructure large datasets from legacy systems into new standardized formats.
- Clean, validate, and harmonize historical data to ensure accuracy and consistency.
- Build automated data pipelines for continuous data updates and system integration.
- Translate raw and unorganized data into readable, analytics-ready datasets.
- Develop interactive dashboards and reports (Power BI or similar).
- Identify data gaps, inconsistencies, and propose improvement solutions.
- Collaborate with technical and business teams during data migration or system upgrades.
- Document data mapping, transformation logic, and maintain version control.
- Build scripts/tools to automate data extraction, mapping, and transformation processes.

Required Skills & Qualifications:

- Bachelor's degree in Data Science, Computer Science, Information Systems, or related field.
- 2–3 years of experience in data transformation, ETL, or system migration.
- Strong hands-on experience with Power BI and dashboard creation.
- Proficiency in SQL and Python (Pandas, NumPy) for data cleaning and restructuring.
- Strong understanding of data modeling, data mapping, and data quality management.
- Ability to simplify complex datasets and make them business-ready.
- Excellent problem-solving and communication skills.

Preferred:

- Experience migrating data from legacy systems to modern platforms.
- Experience building automated ETL pipelines.
- Experience working with large-scale datasets in government or enterprise environments.

Requirements added by the job poster

- Bachelor's Degree

Keeta
Data Analyst

About the job
About Us

Keeta, the international subsidiary of Meituan, the global delivery giant is on a mission to revolutionize food and consumer product delivery worldwide. With our ongoing expansions into Saudi Arabia, Keeta offers exciting opportunities to join a transformative journey that is shaping the future of delivery and retail. Join Keeta, explore the world.

Job is entry level for new graduates, between June of 2024 to October of 2026.

Responsibility:

Monitor real-time data conversion efficiency across on/off-platform channels, diagnose performance fluctuation causes, and drive strategy optimization to ensure DAU growth and homepage conversion rates.

Oversee demand management for traffic-related products (home page, search, recommendation, transactions, push notifications), coordinate R&D implementation, and mitigate launch risks.

Propose differentiated traffic allocation strategies that align with business objectives.

Requirements:

Bachelor's or Master degree of business analysis or related major with SQL skill.

English proficiency, can be workable.

Previous internship experience preferred.

Structured problem-solving with logical output delivery. 5. Strong cross-functional collaboration and solution ownership in complex scenarios. 6. Self-motivated executor ensuring quality delivery in fast-paced environments.

Job Highlights:

Opportunity to participate in the building of an international team, broaden your horizons, and work with global talent.

Fast-growing business with great personal development.

TAWANTECH

Artificial Intelligence (AI) Engineer

About the job

Job Overview:

We are seeking an experienced AI Engineer to design and implement advanced AI and machine learning solutions that enhance banking operations, customer experience, risk analysis, and process automation. The ideal candidate will have a strong background in applied machine learning, data science, and AI systems architecture.

Key Responsibilities:

- Design, develop, and deploy machine learning and AI models tailored to banking and financial services use cases (e.g., fraud detection, credit scoring, customer insights).

- Perform data preprocessing, feature engineering, and exploratory data analysis.

- Work with structured and unstructured data from various sources.

- Collaborate with business units and data engineering teams to define model requirements and deployment strategies.

- Continuously evaluate and improve AI models based on performance metrics.

- Ensure compliance with data privacy, security, and regulatory standards.

- Document processes, experiments, and model outcomes clearly for technical and non-technical stakeholders

Requirements

Required Qualifications:

- Bachelor's or Master's degree in Computer Science, Artificial Intelligence, Data Science, or related field.

- 5-7 years of experience in AI/ML development and deployment.

- Proficiency in Python and ML libraries such as TensorFlow, PyTorch, Scikit-learn, Keras.

- Experience with NLP, Computer Vision, or Predictive Analytics in real-world projects.

- Familiarity with MLOps tools and frameworks (e.g., MLflow, Kubeflow, SageMaker).

- Strong understanding of data pipelines, model lifecycle management, and model versioning.

- Experience working with cloud platforms such as AWS, Azure, or GCP

Researcher

About the job

Job Specific Accountabilities:

R&D Proposal and Project Design:

Design and develop experimental protocols and data collection methods for R&D projects aligned with the organization's strategic objectives.

Independently participate in preparation of R&D proposal components, outlining objectives, methodologies, and expected outcomes to ensure project effectiveness.

Research Implementation:

Conduct R&D activities and lab experiments, analyze data using statistical tools, and apply findings through publications and presentation.

Monitor project progress and adapt strategies to ensure success.

Collaborative R&D Initiatives and Scientific Consultations:

Participate in R&D projects within the organization and externally.

Providing technical input and consultation upon request to support project development.

Contributing to the review of R&D output and assisting in the efforts toward technology commercialization.

Assist in evaluating research outputs for potential translation and real-world application.

Leverage opportunities for cross-functional collaboration, building partnerships with academic institutions, industry leaders, and other stakeholders to drive impactful research outcomes.

Commercialization and Technology Transfer:

Evaluate the feasibility and potential of emerging technologies, conduct in-depth technical assessments to ensure that research outcomes are both scientifically robust and practically relevant.

Analysis and assessment of the market's commercial viability of new technologies to enhance the chances of successful technology commercialization and scaling in coordination with the Commercialization and Technology Transfer function.

Knowledge Transfer:

Contribute to knowledge-sharing initiatives, ensuring the effective dissemination of R&D findings within the organization.

Jointly publish research in reputable scientific journals and present findings at conferences to contribute to the global scientific community and stay updated on the latest advancements.

Engage in exhibitions, scientific events, and outreach activities to highlight the institute's research contributions and foster collaboration with industry and academia.

Qualifications:

Minimum: Bachelor's degree in Scientific or Engineering Fields, Laboratory Technology, Information Technology, Computer Science, Data Science, Artificial Intelligence, Geology, Remote Sensing, Gis, Atmospheric Sciences Environmental Science, Physics, Chemistry, Biology, Mathematics, Laboratory Safety and Management, Astronomy, Astrophysics and Geophysics or any related filed

Requirements added by the job poster

NSG Geospatial Services
Artificial Intelligence Engineer
About the job
About the Role:

We are seeking a highly skilled and motivated AI Engineer (Computer Vision focus) to join our innovative team. In this role, you will be responsible for designing, developing, and deploying AI-driven solutions with a strong focus on image-based machine learning and deep learning. Experience with text-based AI (NLP) will be considered a valuable plus.

You will work closely with cross-functional teams to apply cutting-edge AI techniques to real-world challenges, while ensuring scalability and performance of the solutions.

Key Responsibilities:

Design and implement AI models and algorithms with a primary focus on computer vision.

Contribute to text/NLP-related tasks when required.

Analyze large datasets to extract actionable insights.

Collaborate with data scientists, engineers, and product managers to integrate AI solutions into products.

Optimize models for performance, scalability, and reliability.

Research and stay up to date with the latest AI trends and technologies.

Document processes, models, and performance metrics.

Requirements:

Bachelor's in Computer Science, Artificial Intelligence, or a related field.

Proven experience in Machine learning for images (Computer Vision).

Experience with PyTorch (essential).

Experience with TensorFlow, Keras, Hugging Face (nice to have).

Strong programming in Python (essential).

Programming in JavaScript (nice to have).

Experience with NLP (text-based AI) (nice to have).

Experience in API development and integration.

Experience in deploying AI models into production environments.

Knowledge of cloud platforms such as AWS, Azure, or Google Cloud (nice to have).

Strong analytical and problem-solving skills.

Excellent communication and teamwork abilities.

Requirements added by the job poster

- 2+ years of work experience with Amazon Web Services (AWS)
- Bachelor's Degree
- 2+ years of work experience with Machine Tools

NOVOTAK

Software Engineer

About the job

The ideal candidate will be responsible for developing high-quality applications. They will also be responsible for designing and implementing testable and scalable code.

Responsibilities

Develop quality software and web applications

Analyze and maintain existing software applications

Design highly scalable, testable code

Discover and fix programming bugs

Qualifications

Bachelor's degree or equivalent experience in Computer Science or related field

Development experience with programming languages

SQL database or relational database skills

DATA

Artificial Intelligence Programmer

About the job

Company Description

At DATA, we turn information into intelligence. We specialize in advanced analytics and AI solutions that help businesses unlock insights, automate processes, and drive smarter decisions. From data strategy to machine learning, DATA empowers organizations to grow with confidence. Our mission is to constantly innovate and provide cutting-edge technology to assist companies in their digital transformation.

Role Description

This is a full-time on-site role for an Artificial Intelligence Programmer located in the Riyadh Region. The AI Programmer will be responsible for developing and implementing AI models, conducting research on machine learning and AI techniques, and working on various projects involving neural networks, natural language processing, and pattern recognition. Daily tasks will include coding, testing, and debugging software, as well as collaborating with cross-functional teams to deliver high-quality AI solutions.

Qualifications

- Strong skills in Pattern Recognition and Neural Networks
- Background in Computer Science and Software Development
- Experience with Natural Language Processing (NLP)
- Excellent problem-solving and analytical skills
- Ability to work collaboratively in a team environment
- Bachelor's degree in Computer Science, AI, or related field
- Experience in handling large datasets and using AI tools and libraries

Exotech Co
(AI) Artificial Intelligence Consultant

About the job

Company Description:

Exotech is a Saudi-based emerging technologies company at the forefront of AI, IoT, and digital transformation. We specialize in developing intelligent systems that redefine innovation, automation, and decision-making across industries. Our mission is to empower organizations through advanced, scalable, and ethical AI solutions that create measurable impact. Headquartered in Riyadh, Exotech is driven by a team of experts passionate about shaping the future of technology through innovation, precision, and purpose.

Role Description:

This is a full-time on-site role for an Artificial Intelligence (AI) Consultant, based in Riyadh, Saudi Arabia. The consultant will play a key role in advising clients on AI strategy, developing advanced AI models, and guiding end-to-end AI solution implementation. Daily responsibilities include conducting data analysis, designing machine learning pipelines, building predictive models, and applying natural language processing (NLP) and pattern recognition techniques to real-world business challenges. The ideal candidate will bridge the gap between data science and strategic consulting, ensuring AI adoption aligns with client objectives and delivers tangible outcomes.

Qualifications

- 5+ years of experience in AI, data science, or applied machine learning
- Proven expertise in machine learning, NLP, RAG, and predictive modeling
- Proficiency in Python, TensorFlow, PyTorch, N8N or Scikit-learn
- Solid understanding of data science methodologies and pattern recognition
- Experience designing and implementing AI-driven business solutions
- Strong consulting background and ability to translate technical insights into strategic recommendations
- Excellent analytical, problem-solving, and communication skills

Master's degree or higher in Computer Science, Data Science, Artificial Intelligence, or a related field

Experience in the technology, software, or digital transformation industry is a plus
